## Morality, Corruption and the State:

### Insights from Jharkhand, Eastern India

The fading hopes of achieving development through strong government in many postcolonial states have meant an increasing focus on ‘good governance’ by multilateral development institutions. While governance in Africa is interpreted as a return to ‘the heart of darkness’ (Bayart, 1993), a ‘criminalisation of politics’ (Bayart et al., 1999), India is gripped by a pathology of corruption rotting the core of the state (Gill, 1998; Vishvanathan and Sethi, 1998). A central concern of this governance agenda is an idea of a growing crisis: a cancer of corruption whose corrosive spread hinders and obstructs development. Despite the public scandals in the West (see Haller and Shore, 2005) – the proliferation of anti-corruption, accountability and transparency teams committed to controlling and curing corruption centre on the ‘Third World’.

Definitions are widely debated but the World Bank (1992; 2007) promoted one is popular – corruption is the misuse of public property, office or mandatory power for private gain. Corrupt people hinder the developing economy by using public resources for their personal gain. The moral agenda underpinning this argument is that one must work solely for the common good: the spread of corruption is an effect of people satisfying personal interests rather than the collective good of development. The corrupt actor is a rational economic man, usually with dubious moralities, who misuses state resources for private gain.

1  
2  
3 This paper argues for a more sophisticated understanding of corrupt practices by showing  
4 how they are situated in wider understandings of the state and are underpinned by the inter-  
5 relations between a moral and political economy. It draws on ethnographic fieldwork carried  
6 out since 1999 in Bero Block, Jharkhand, India and focuses on retail corruption<sup>1</sup> linked to the  
7 Block Development Office, the most local level office of the district administration in India  
8 and through which programmes of the Ministry of Rural Development were implemented.

15  
16  
17  
18  
19  
20 Several related points are made. First, defining corruption as underpinned by rational  
21 economic action tells one little about localised nuances of morality and legitimacy attached to  
22 these practices. Gupta (2005) is correct that narratives surrounding corruption are central to  
23 understandings that ordinary people have of the state. However, the reverse is equally true:  
24 understandings of the state are crucial to narratives and practices of corruption. The rural  
25 elites of Jharkhand, primarily the descendants of higher caste *ex-zamindars* (landlords) of the  
26 area (the main beneficiaries of state development schemes for the poor) understood and, to a  
27 certain extent, accepted *the idea* that the state should act for the common good. However,  
28 state determined rules and norms about developmental projects were *in practice* not seen as  
29 beneficial for the common good. They acknowledged that the state could not be separated  
30 from the personal agency of the people that make it and shape it; that many state development  
31 schemes were inappropriate; and more problematically, that the intended beneficiaries, the  
32 poor *adivasis* of the rural area, were in any case too *jangli* (wild and savage) to access them.  
33

45  
46  
47  
48  
49  
50

51  
52  
53 These rural elites accessed state resources through an informal economy of the state -  
54 practices that some commentators would consider 'corrupt', the abuse of public resources for  
55 private economic gain. History and anthropology have taught us how economic actions of  
56 people are defined by a moral economy of rights and expectations, which though may be  
57  
58  
59  
60

1  
2  
3 rooted in economic practices, are not determined by financial utility (Scott, 1979; Thompson,  
4  
5 1971). In Jharkhand, 'corrupt practices' were underpinned by a moral economy and not just  
6  
7 indulged in for private gain. They were, as Olivier de Sardan (1999) argues, embedded in  
8  
9 wider social relationships and understandings that gave them legitimacy and anchored them  
10  
11 in everyday practice. Motivations for engaging in the informal economy of the state included  
12  
13 social pressure within a nexus of power relations between individuals, the desire to belong to  
14  
15 a particular group of people and become a particular kind of man, and the importance of the  
16  
17 relationship between a short and long term cycle of exchange in which morality was  
18  
19 governed by a cosmic order. Moreover, a localised discourse on rules and norms was  
20  
21 prevalent.  
22  
23  
24  
25  
26  
27  
28

29 My second point is that communities at the receiving end of development schemes are not  
30  
31 homogenous: it is important to address the relationship between different social classes, and  
32  
33 their related state access, influenced by distinct yet interdependent values. I thus highlight the  
34  
35 multiple moral economies regulating economic action in rural Jharkhand. The majority in this  
36  
37 rural region are poorer Munda and Oraon *adivasis*, tenant descendants of the old village  
38  
39 landlords. Unlike the rural elites, they saw the state as inherently and irredeemably beyond  
40  
41 the moral pale, wanted little to do with the state, did not accept the idea of the state as acting  
42  
43 for the public good, and did not get involved in knowing about state practices. Instead, they  
44  
45 promoted an alternative vision of sovereignty, in the form of the *adivasi parha*.  
46  
47  
48  
49  
50  
51  
52

53 My third point is that the moral economies within which we should understand 'corrupt'  
54  
55 practices are intimately connected to a political economy as seen by Roseberry (1988: 179),  
56  
57 whereby social and cultural phenomena are situated in the wider circumstances of sustaining  
58  
59 a living and the structures of power that shape and constrain activity. *Adivasi* perspectives  
60

1  
2  
3 were not merely based on cultural or moral imaginings but on a political economy of  
4  
5 historical/colonial experiences of state formation and encouragement by village elites  
6  
7 colonising the local state and as such interested in blocking those below them in the class  
8  
9 hierarchy from interacting in the informal economy of state development schemes on equal  
10  
11 terms. My aim in highlighting the political economy of imaginations of the state is to show  
12  
13 that *adivasis* do not have some inherent moral assumptions about the state, but that ideas of  
14  
15 morality are historically constituted, managed and reproduced. Transformations in political  
16  
17 economy transforms accompany changes in the moral economy. This is evidenced in rural  
18  
19 Jharkhand where the power base of the village elites is beginning to be challenged by a new  
20  
21 class of educated *adivasi* youth who are increasingly imagining the idea of the state as acting  
22  
23 for the public good and therefore engaging with the state.  
24  
25  
26  
27  
28  
29  
30  
31

## 32 **The Context**

33  
34  
35  
36 Jharkhand's doubly marginalised indigenous populations are a focus for developmental  
37  
38 efforts. Marginalised because they live in a state housing one of India's poorest populations  
39  
40 where, in 1997, 63% of its 26.9 million people were thought to live 'below the poverty line',  
41  
42 with 78% in rural areas, and where only 40% of villages have road access and 15% have  
43  
44 electricity. Doubly marginalised because many are thought to be so lowly as to be placed  
45  
46 outside the caste system. These are the people officially designated Scheduled Tribe status,  
47  
48 more popularly known as *adivasis*, and in colonial times called tribals. The majority of  
49  
50 development resources come through the official state machinery via the Block offices.  
51  
52  
53  
54

55  
56  
57 The paper begins with an account of a 1999 conflict in the Bero Block Development Office  
58  
59 but also draws on ethnographic research exploring the wider rural area from a base in a  
60

1  
2  
3 village called Tapu. With a population of about 550 people, Tapu represents the historical  
4  
5 deep divisions of the area. On the one hand, approximately 20% of the population are  
6  
7 descendants of the old landlords, the rural elites. Although the rural elites include a few  
8  
9 *adivasi* descendants of land revenue collecting families, the majority are all higher castes,  
10  
11 collectively known as *sadans*. On the other hand, there are descendants of the old tenants,  
12  
13 *adivasis* (mainly Mundas and Oraons and constituting 60% of the region's population), and  
14  
15 some *dalits* and other lower castes.  
16  
17  
18  
19  
20  
21

22 At first glance, the differences between the *sadan* elites and the *adivasis* may not be very  
23  
24 apparent. The *sadans* also lived in mud houses and had neither electricity nor sanitary  
25  
26 facilities. They also fetched water from wells or water pumps, collected firewood from the  
27  
28 forest, farmed their fields and sometimes even partook in manual labour. These similarities  
29  
30 marked an 'aesthetics of poverty', that is the power of the seductive visual imagery of  
31  
32 poverty, through which it is easier for development schemes to legitimise why these rural  
33  
34 elites are the main beneficiaries of development resources in the name of the poor - most of  
35  
36 the rural elites are registered on the government 'Below Poverty Line' list and on the 'Red  
37  
38 Card' lists of the Public Distribution System for the poorest, whilst most *adivasis* are not.  
39  
40  
41  
42  
43  
44  
45

46 However, a deeper analysis that moves beyond an 'aesthetics of poverty' – and that addresses  
47  
48 poverty not simply in terms of material resources but also as a form of systematic socio-  
49  
50 political exclusion from the development process – may draw attention to some marked  
51  
52 differences. For instance, the *sadans* usually had larger plots of irrigated land and more cattle  
53  
54 than the *adivasis*. The *sadans* had family bank accounts. Although literacy rates were low in  
55  
56 the village, their children attended at least primary school. But perhaps the most important  
57  
58 difference for this article is that whereas the *sadans* maintained their livelihoods through  
59  
60

1  
2  
3 direct and/or indirect benefits from the developmental machinery infiltrating the rural areas,  
4  
5 most often in the form of the state, the *adivasis* sought to keep outside authorities such as the  
6  
7 state away.<sup>2</sup>  
8  
9

10  
11  
12 The hostile antagonism, mutual disparagement and contrasting values of the *sadans* and the  
13  
14 *adivasis* explored here are partly explained by the socio-economic history of this Jharkhand  
15  
16 region. One result of the eighteenth century colonial land settlement policies, the higher caste  
17  
18 landlords of the area displaced lower castes and tribes from other areas and brought them as  
19  
20 servants to villages they controlled. In return for their servitude, the landlords gave them a  
21  
22 small amount of land to cultivate. In 1932 while the average size of a landlord landholding in  
23  
24 Tapu was 33.2 hectares, that of an *adivasi* was about 8.3 hectares. By 1992, however, the  
25  
26 land reform changes of the fifties (such as the Bihar Land Reforms Amendment Act which  
27  
28 placed a ceiling on land ownership), meant that the disparity had somewhat lessened and all  
29  
30 the *adivasis* now owned some land. Moreover, the landlord descendants had an average  
31  
32 landholding of 2.7 hectares and the *adivasis*, 1.8 hectares. As a result of these changes,  
33  
34 coupled with the now broken social contract of *adivasi* servitude to the landlord descendants,  
35  
36 the latter sought alternative routes to maintain their local dominance. From land, their  
37  
38 attention turned to a control over state resources, whether directly (from government jobs) or  
39  
40 indirectly (through, for instance, development contracts). The *sadans* had different  
41  
42 aspirations from the *adivasis* who they looked down on and often called by the derogatory  
43  
44 term '*jangli*'. In contrast to those above them in the class hierarchy, the poorer majority were  
45  
46 in fact often proud to be of the *Jungle Raj* (the Forest Kingdom) and of the values this  
47  
48 entailed. They generally sought to keep the state away, lived off arable and livestock  
49  
50 agriculture, fruits and leaves from the trees and manual labour. These changing material  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 contexts are important to understand the analyses which follow and the incident which  
4 prompts them, that of the incomplete building:  
5  
6  
7  
8  
9

### 10 11 12 **Incomplete Building**

13  
14  
15  
16  
17 Bero 1998. A cheque of Rs2 lakh (£3100) arrived for the construction of a training centre for  
18 the Development of Women and Children in Rural Areas (DWCRA) - one of several schemes  
19 implement by the Block Development Office (or Block Office).<sup>3</sup> Launched in 1982, and  
20 partially funded by UNICEF till 1996, DWCRA was a Ministry of Rural Development  
21 response to a male bias in poverty alleviation programmes. In line with the emerging  
22 popularity of micro-credit/micro-enterprise schemes, DWCRA aimed at improving poor  
23 women's economic condition by promoting their collective participation in self-help income  
24 generating activities.  
25  
26  
27  
28  
29  
30  
31  
32  
33  
34  
35  
36  
37

38  
39 The Ministry's role in this 'empowerment' of women was, generally, low resource. The  
40 Ladies Extension Officer, Kamini Srivastava,<sup>4</sup> the only female officer in the Block Office,  
41 was to introduce DWCRA's 'participatory principles' to poor rural women. She worked  
42 under the Office head, the Block Development Officer, Makhan Pandey, and, like most  
43 Jharkhand officers, was of Bihari high caste origin. The Ministry was to train beneficiaries,  
44 provide a revolving fund of Rs 25000 (£385) for raw materials and, as a one-off payment to  
45 certain groups, money to build training centres.  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56

57  
58 In the Bero DWCRA files, largely eaten by white ants, fourteen groups existed and the  
59 records were unchanged over time. In the State's capital Ranchi, the District DWCRA  
60

1  
2  
3 supervisor declared the 14 Bero groups successful: four new ones would be formed in 1999.  
4  
5 Meeting paper targets was essential to receiving the next monetary instalment from the  
6  
7 Ministry. In fact, Bero Block officers acknowledged that of the 14 groups only two really  
8  
9 existed – in the villages of Pokal Tikra and Karanj Toli. Pokal Tikra, the model group, was  
10  
11 chosen as the site for the training centre.  
12  
13  
14

15  
16  
17 The output produced determined ‘success’ and Pokal Tikra was considered successful  
18  
19 because they produced hand-woven carpets. However, the officers were careful not to  
20  
21 mention to visitors that the carpets were woven in a ‘factory’ run as a Non-Governmental  
22  
23 Organisation (NGO) by a woman named Sumani Devi. Whilst Sumani was a Maheto caste  
24  
25 descendant of the *ex-zamindars* of Pokal Tikra, the DWCRA beneficiaries were all *adivasi*  
26  
27 women who were descendants of the *ex-tenants* of the landlords. They walked two kilometres  
28  
29 from the *adivasi* dominated hamlet, Sember, to work on Sumani’s handlooms in Pokal  
30  
31 Tikra’s main hamlet. Unsurprisingly, in the fiasco that evolved over the building, Sumani was  
32  
33 a central actor.  
34  
35  
36  
37  
38  
39  
40

41 The construction of any Block Office building attracts attention amongst the officers because  
42  
43 commissions taken as ‘percentages’, or ‘*pcs*’ off the money for the scheme. The money  
44  
45 arrives from the District Office in the name of the Block Development Officer. The  
46  
47 contractor receives the money in instalments for which a series of documents have to be  
48  
49 signed by various officers. Percentages are taken while signing these documents. In all  
50  
51 construction programmes there are two sets of sanctions: in the technical and the  
52  
53 administrative wings. For example, in the technical wing, the Junior Engineer can take 10%,  
54  
55 Assistant Engineer 3%, Executive Engineer 1.5%. The administrative wing includes the  
56  
57 Block Development Officer who can take 5%, the supervisor 3%, the head clerk 3%, the  
58  
59  
60

1  
2  
3 cashier 2% and the assistant clerk 1.5%.<sup>5</sup> If the costs can lower, the cuts are higher.  
4  
5 Altogether, approximately 30% of the scheme money goes to the Block staff.<sup>6</sup> These  
6  
7 ‘systems of mediation’ are significant in making the otherwise resource-poor DWCRA a low  
8  
9 priority for the officers. However, when Pokal Tikra was chosen as a site for the Rs2 lakh  
10  
11 DWCRA centre, DWCRA became the focus of Block Office attention.  
12  
13  
14  
15

16  
17 But these construction schemes were also the centre of attention for the rural elites. As part of  
18  
19 the participatory development mandate, through which villagers chose schemes, public  
20  
21 petitions for particular schemes were brought in by the rural elites to the Block Office. Only  
22  
23 some of the proposed schemes would be selected and schemes promoted by influential elites,  
24  
25 especially those backed by a Member of Legislative Assembly (MLA) or a Member of  
26  
27 Parliament (MP), were preferred.<sup>7</sup> Once a project was selected, a village contractor was to be  
28  
29 chosen through a public meeting. Often, these meetings did not take place, as influential  
30  
31 elites would fix outcomes. When they did take place, meetings were dominated by rural elites  
32  
33 competing with each other.  
34  
35  
36  
37  
38  
39  
40

41 The choosing of a village contractor was a highly fraught affair as potential contractors could  
42  
43 siphon off up to 10% of the total sum of the project by poorer quality materials and shallower  
44  
45 foundations than proposed, or by accounting for twice the number of labourers who worked.  
46  
47  
48  
49

50  
51 In the meeting to choose the Pokal Tikra DWCRA training centre contractor, although  
52  
53 Sumani’s proposed candidate stood in election, another man was chosen. Furious, Sumani  
54  
55 accused the head of the Block Office, Pandey, of fixing the results. She claimed that Pandey  
56  
57 had backed a worker of the Congress Party MLA who, in return, would secure his next  
58  
59 transfer of post. Sumani also claimed that the chosen contractor would enable the smooth  
60

1  
2  
3 operation of the systems of percentages, and would negotiate a particularly good bribe for  
4  
5 Pandey for commissioning the project. Moreover, she declared that the chosen contractor  
6  
7 wanted on his land to colonise as a drinking club for men.  
8  
9

10  
11  
12 Pandey denied these allegations: the decision had been democratic. He urged Sumani to stop  
13  
14 interfering in Pokal Tikra affairs: she was a woman and an outsider who had returned to her  
15  
16 natal village after a failed marriage. Moreover, she was not poor, and should have no role in  
17  
18 DWCRA whose beneficiaries were supposed to be 'Below Poverty Line'. Finally, Pandey  
19  
20 argued that the 'real' reason Sumani was angry was because she wanted the building on her  
21  
22 land to capture as a house extension.  
23  
24  
25  
26  
27  
28

29  
30 In response, Sumani mobilised Sember residents to strike for fifteen days from the  
31  
32 agricultural labour that Pokal Tikra ex-*zamindars* depended on. She caused substantial  
33  
34 problems and threatened further trouble. When the foundations were dug, Sumani asked  
35  
36 Sember villagers to fill them with stones. The confrontation worsened. One night, a group of  
37  
38 armed men, claiming they were underground Maoist guerrillas, beat up the contractor and  
39  
40 two family members. The rumour spread that Sumani was behind these developments.  
41  
42  
43 Sumani also took 30 Sember women to the Deputy Development Commissioner and District  
44  
45 Commissioner in Ranchi to complain against Pandey commissioning the building to an  
46  
47 inappropriate contractor.  
48  
49  
50  
51  
52

53  
54 Deterred by these developments, Pandey (in whose hands the ultimate authority of all Block  
55  
56 decisions remained), wanted to cancel the project all together. His strategy was to feign  
57  
58 ignorance about the 'real' conditions of the 'model' DWCRA group. He staged an official  
59  
60

1  
2  
3 visit by Srivastava so that the Block Office would 'discover' the group's failure to function  
4  
5 under the guidelines.  
6  
7

8  
9  
10 Srivastava's visit to Pokal Tikra was unannounced. I accompanied her. Srivastava asked for  
11  
12 the DWCRA group leader as we entered a room with two handlooms worked by Oraon  
13  
14 women. The women looked scared, did not reply and continued working without taking their  
15  
16 eyes off the looms. Eventually one of them called for Sumani. Srivastava shouted, 'Sumani is  
17  
18 nothing to do with DWCRA.' Sumani welcomed us with Moti Devi, the alleged leader of the  
19  
20 carpet-weaving group. The next hour saw an explosion of accusations between Srivastava  
21  
22 and Sumani.  
23  
24  
25

26  
27  
28 Srivastava ignored Sumani and asked Moti for the DWCRA files. The files were blank and  
29  
30 Srivastava criticised the group for not maintaining them. Moti was shaking, nervous and  
31  
32 nodded at everything Srivastava said. Sumani, however, fought back. She asked how Moti  
33  
34 was supposed to know about maintaining files when Srivastava had never shown her. She  
35  
36 attacked Srivastava for acting like all state workers, frightening the women, not caring about  
37  
38 them, never coming to see them, and not explaining how DWCRA should work. She pointed  
39  
40 out that DWCRA was not about file maintenance but income generation. The heated  
41  
42 argument escalated. Srivastava told Sumani that she had no right to interfere. Revealing her  
43  
44 awareness that the DWCRA group had never really existed, she argued that Sumani was in  
45  
46 fact exploiting DWCRA women as factory labourers. Sumani argued that at least her  
47  
48 'factory' provided a job for the women and wasn't just a programme only on paper.  
49  
50  
51  
52

53  
54  
55  
56  
57  
58 When we finally left Srivastava was fuming. She had, however, accomplished the task of  
59  
60 'officially' uncovering that the DWCRA group was not functioning because of Sumani's

1  
2  
3 interference. The Pokal Tikra group could be closed and the matter of the building dropped.  
4  
5 When I returned for further fieldwork in 2000, the building, like many others, remained an  
6  
7 abandoned incomplete construction.  
8  
9

### 10 11 12 **Corrupt activities are not just explained by financial utility** 13

14  
15  
16  
17 The negotiations, percentages, bribes and gifts that characterise the informal economy of the  
18  
19 developmental state in Jharkhand would have stopped, in this case, when the DWCRA  
20  
21 building was abandoned. Nevertheless its contests give a flavour of the political landscape of  
22  
23 the informal economy of block development schemes and its analyses might enable a deeper  
24  
25 understanding of the processes shaping practices termed 'corrupt'. In what follows, I begin  
26  
27 with people like Sumani and the competing contractor to show the multiple factors affecting  
28  
29 their engagement in the informal economy of the state. In much of the literature these  
30  
31 contractors are called 'mediators', 'intermediaries', or 'brokers', blurring the boundary  
32  
33 between the state and society (Gupta, 1995; Gupta, 2005; Neocleous, 1996), sometimes  
34  
35 perpetuating patron-client relations (Bailey, 1969), at other times more positive forces of civil  
36  
37 society, creating order in the fragmented politics of the post-colonial state (Bierschenk et al.,  
38  
39 2002; Lewis and Mosse, 2006). In Jharkhand, they all emerge from the rural elites, usually  
40  
41 the descendants of higher caste *ex-zamindar*, but sometimes Scheduled Tribe *ex-revenue*  
42  
43 collecting families. Unlike Sumani, most mediators in the Bero area were men.  
44  
45  
46  
47  
48  
49  
50  
51

52  
53 In the World Bank perspective these contractors are rational economic individuals  
54  
55 maximizing personal gain. Since the abolition of *zamindari* in the 1950s, state benefits were a  
56  
57 central means through which many *zamindar* descendants attempted to maintain their wealth.  
58  
59 Block Office contracts were important as their implementation offered the opportunity to  
60

1  
2  
3 siphon off funds. However, whilst the objective may be obtaining material benefits from the  
4  
5 state, being a contractor was not solely about financial gain.  
6  
7

8  
9  
10 Amongst potential contractors, for instance, securing contracts was also about aspiring to  
11  
12 particular ideas of masculinity – a modern man of the town who hob-nobbed in the streets,  
13  
14 restaurants and shops of Bero and became part of a peer group of young men acquainted with  
15  
16 state activities and officials, built personalised relations with those ‘in the know’, and  
17  
18 developed skills of being in the right place at the right time. Circulating in these elite  
19  
20 networks in Bero was exciting in comparison to the more mundane village environment. It  
21  
22 was a challenge to become accepted to wine and dine amongst these networks.<sup>8</sup>  
23  
24  
25  
26  
27

28  
29 Becoming accepted was one thing but acquiring status was another. In the village, status  
30  
31 came with birth, but in Bero young men had to secure their credibility amongst the ‘worldly  
32  
33 actors’ of predominantly *ex-zamindars*. Tension and conflict over state resources was rife.  
34  
35 The men were linked to branches of a political party, whose most prominent personnel  
36  
37 campaigned for the MLA seat every five years. Particular candidates were supported in the  
38  
39 hope that victory would influence the distribution of development contracts in favour of  
40  
41 allies.  
42  
43  
44  
45  
46  
47

48  
49 Becoming accepted, acquiring status and securing a contract, required skill and tactics to  
50  
51 perform and ‘do’ ‘politics’. One had to be shrewd, intelligent but also willing to engage in  
52  
53 ‘dirty’ activities (c.f. Goldman, 2001; Ruud, 2001). ‘Dirty’ not just because of the tactful  
54  
55 alliance building involved, but also because of the secrecy, caution and the potential to stab  
56  
57 allies in the back if they became a threat. ‘Doing politics’ was dangerous. While many young  
58  
59 men of *zamindar* descent tested their ability to do politics, only some sustained involvement  
60

1  
2  
3 for more than a couple of years. 'Doing politics' was often a transitory and transient activity  
4  
5 – a life-cycle experience, after which one settled down to a more 'peaceful' existence.  
6  
7  
8

9  
10 In summary then, the financial utility of pocketing illegal money from Block development  
11  
12 schemes were not the only attractions for Bero elites to interact in the activities many would  
13  
14 call corrupt. Far from being rational economic maximising concerns, engaging in 'corrupt'  
15  
16 practices was also about the non-material interests of becoming accepted amongst a particular  
17  
18 group of people; acquiring status within that group; a life-cycle experience of the challenge  
19  
20 and fun of doing politics.  
21  
22  
23  
24  
25

### 26 27 **The moral economy of 'corrupt' practices**

28  
29  
30

31  
32 The multiple reasons why rural elites engage in 'corrupt' practices were accompanied by a  
33  
34 complex moral economy. A number of points of interest emerge. Firstly, illegality does not  
35  
36 equate to immorality. Money made from contractor cuts was locally called second order  
37  
38 work, resulting in second order money (distinct from first number work and money from  
39  
40 farming or hard manual labour), because it was thought to involve illegal activity. Second  
41  
42 order work, however, was not condemned by the village elites for its illegality (c.f. Harris,  
43  
44 1996). In fact a localised moral discourse about the state legitimised second order work.  
45  
46  
47  
48  
49

50  
51 Thus, secondly: 'corrupt practices' were legitimised because there was generally a lack of  
52  
53 commitment to the state as it manifested itself in rural Jharkhand. Underlying the  
54  
55 international discourse on corruption is the idea that for progressive economic development,  
56  
57 people in modern society should submit to the state the ability to define and police the  
58  
59 principles of morality, or good behaviour, for the collective good through impersonal rules –  
60

1  
2  
3 such as the rule of law. Thus as Robertson reminds us, 'what in modern times we have been  
4 calling *corruption* is a byproduct of the formal rules that seek to separate persons from the  
5  
6 offices they hold' (2006:8). There is, as Hart points out, a huge effort involved in separating  
7  
8 the impersonal state from personal agency. When people step across this division, the word  
9  
10 often used is 'corruption' (Hart, 2005:29), and is one reason why some explain the origins of  
11  
12 corruption as the extreme personalisation of power relationships (Bayart, 1993). Corruption  
13  
14 violates the fundamental *idea* of the state as an impartial servant of the people, as the non-  
15  
16 personal guarantor of a certain impersonal social order. This idea is a crucial one because the  
17  
18 legitimacy of modern states, to a large extent, rests on this claim (Mooij, 1992). Yet, as  
19  
20 anthropology has recently shown us, the separation of the impersonal state from personal  
21  
22 society is highly problematic – there is a complex relationship between personal agency and  
23  
24 impersonal institutions - personality/personal agency is intrinsic to bureaucracy (Brass, 1997;  
25  
26 Fuller and Harriss, 2001; Gupta, 1995; Gupta, 2005). In Jharkhand, the state was thought to  
27  
28 be incapable of fulfilling the promises of a servant of the people, the guarantor of a certain  
29  
30 social order, and a power above partial interests because it was recognised to be run by  
31  
32 people with personal agendas and whose vision of the common good was removed from that  
33  
34 of ordinary rural people. Moreover, second order work was legitimised because most  
35  
36 development schemes were thought to be inappropriate for the rural areas as they were  
37  
38 designed by New Delhi officials. For instance, both Sumani and Srivastava agreed that rather  
39  
40 than a fancy income generating project, rural women needed a factory for their  
41  
42 'development'. Rural elites, in fact were often prejudiced towards the poorest in the rural  
43  
44 areas. Development schemes were considered wasted on *jangli adivasis* who were too  
45  
46 uncivilised to care for or know what to do with them. Like Sumani, many rural elites actually  
47  
48 legitimised their activities by arguing that they were expropriating state resources for more  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 useful purposes, even calling themselves 'sevaks' or 'social workers' to outsiders (c.f. Mayer,  
4  
5 1981).  
6  
7  
8  
9

10 Thirdly, engaging in 'corrupt practices' entailed highly morally charged discussions around  
11 who got contractorship, why and the way in which the contractor's cut was spent. While ex-  
12 *zamindars* saw contractorship as their hereditary right, those wanting to join these elite  
13 networks took the more democratic approach that all educated young men should have the  
14 opportunity. As Sumani's case shows, the moral discourse on contractorship can be gendered.  
15 When a woman tried to gain contractorship she was condemned for intervening in the world  
16 of men. Moreover, as the number of potential village contractors rose, there was an  
17 increasing trend towards rival contractors condemning each other for using *do number paisa*  
18 for selfish ends. As a result, competing village elites now pressurised contractors to divert  
19 their cut to other common village causes, especially as religious donations (c.f. Mosse, 2001).  
20 In Tapu, a moral discourse around money siphoned off from construction contracts was  
21 emerging that in many ways appeared to mirror the relationship between short-term and long-  
22 term exchange described by Parry and Bloch (1989). Contractors had to convert, and hence  
23 purify, their second order money from individualistic short term exchanges of contractor cuts  
24 into first number sums, in this case of a long term transactional or cosmic order of religious  
25 capital by contributing to the building of a Hanuman temple.  
26  
27  
28  
29  
30  
31  
32  
33  
34  
35  
36  
37  
38  
39  
40  
41  
42  
43  
44  
45  
46  
47  
48  
49  
50

51 Fourth extra-legal activities were differentiated and all were not equally condemned. The  
52 giving and taking of *chai-pani* (literally meaning tea-water);<sup>9</sup> the *pagdi* (the bribe); and the *pc*  
53 or percentage, matching Parry's (2000) useful distinction between the gift, bribe and  
54 commission, were all differently morally evaluated. Gift giving was the least reprehensible  
55 not only because it was part of a broader social system of maintaining relations between  
56  
57  
58  
59  
60

1  
2  
3 people, but also because it was considered willingly engaged in. In contrast, the bribe was  
4 rarely voluntary on the part of the donor, and thus its giving was sometimes with resentment.  
5  
6 Furthermore, the bribe's negotiability engendered feelings of unethical practice, especially if  
7  
8 one had to give more than others. The commissions, the third form of payment, were a fixed  
9  
10 percentage of the value of a scheme given by contractors to different officers, expected and  
11  
12 contracted in a manner that was so 'matter-of-fact' that they were rarely considered morally  
13  
14 wrong. Indeed, it was mainly deviations, not the percentages themselves, which were deemed  
15  
16 morally wrong. For example, if an officer tried to take more than his allocated percentage,  
17  
18 s/he would most likely be regarded as greedy. Yet if an officer did not take their allocated  
19  
20 percentage s/he may be regarded with respect, not because they acted legally, but because  
21  
22 those who were not greedy were praised. In a similar vein, if a contractor tried to get away  
23  
24 without paying the commission, s/he would be considered immoral. This would also hold for  
25  
26 those who escaped payment due to caste or kinship relations with the officers. Thus morality  
27  
28 in the discourse of corruption was often judged in the context of values such as caste,  
29  
30 negotiability, gift giving, hierarchy and greediness.  
31  
32  
33  
34  
35  
36  
37  
38  
39  
40

41 Fifth, the alleged immorality of 'corrupt' activities was sometimes a performance, a tool with  
42  
43 which village elites played out the competition between them. In fact we need to segregate  
44  
45 the practices of what is called corruption (but which often amounts to legitimate economic  
46  
47 activity) from corruption as a discourse used to delegitimise others/political opponents. For  
48  
49 instance, Sumani claimed that Pandey had backed the chosen contractor because he would  
50  
51 submit to the system of percentages and bribes. However, she also told me that if her  
52  
53 candidate had received the contractorship she would also have given the percentages. The  
54  
55 officials were also engaged in a certain performance of morality around DWCRAs. It was  
56  
57 clear that everyone had known for years that the DWCRAs groups were paper targets, and that  
58  
59  
60

1  
2  
3 even in Pokal Tikra, the group were really factory workers. Yet, only when things had not  
4 gone according to Pandey's plan, was Srivastava sent to 'discover' that Sumani had turned  
5 the DWCRA women into factory labourers, in order to cease the construction.  
6  
7  
8  
9

10  
11 Exploring some of the wider context of the DWCRA building shows that people's  
12 engagement in practices some would call 'corrupt' is not just for financial utility but also for  
13 a range of non material reasons and moreover, that these practices were governed by ethical  
14 norms and debates. However, the moral economy of rural Jharkhand is multivarious and a  
15 different class of rural peasants, represented by the women who worked in Sumani's factory,  
16 the *adivasi* labourers, have a different view of the state. And it is to this moral economy that I  
17 now turn.  
18  
19  
20  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30

### 31 **Multiple moral economies: *adivasis***

32  
33  
34  
35  
36 The tenant descendants of the *zamindars*, the majority of who were *adivasis*, saw the state as  
37 alien, dangerous and best kept away from. I describe this moral economy in further detail  
38 elsewhere (Shah, 2007) and here outline the main arguments. Exemplary of the way in which  
39 those in the margins of stately power are often complicit in reifying the state (Taussig,  
40 1992:132), *adivasis* constructed the state as an abstraction, as inherently and irredeemably  
41 beyond the moral pale, and not in their common good. In Tapu, the state with its officers and  
42 development projects took on an almost ominous Kafkaesque quality for the Mundas,  
43 encompassed in the term *sarkar*.  
44  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56

57  
58 Whenever a state jeep arrived in Tapu, for example, whereas the landlord descendants rushed  
59 to greet the visitors, the Mundas would steer well away. Somra Munda once said, 'In the  
60

1  
2  
3 olden days when *sarkari* (state) people arrived, women would rush into their houses, sweep  
4 children in and close doors, and men would even hide in the forest.’ This fear of the state has  
5 also been noticed in the neighbouring state of Chhattisgarh, but also historically amongst  
6 adivasis of Western India.<sup>10</sup>  
7  
8  
9  
10  
11  
12  
13  
14

15 There were several reasons for *adivasis*’ desire to distance themselves from the state. Firstly,  
16 their attitudes are embedded in the history of colonial state-formation which proved very  
17 exclusive and exploitative for poor adivasis. Colonial processes of land settlement and elite  
18 formation resulted in outside state officers and moneylenders (the outsiders were called  
19 *dikus*) working with and producing landed elites, *zamindars*, alienating *adivasis* from their  
20 land, taking over their forests, and rising indebtedness (Guha, 1999 (1983); Singh, 1966). The  
21 foreign state officers carried on into the post-independence period in the form of Hindu high  
22 caste Biharis with their exploitative and oppressive policies.  
23  
24  
25  
26  
27  
28  
29  
30  
31  
32  
33  
34  
35

36 As late as the nineteen eighties, the police were the most significant experience of the state  
37 for the Tapu Mundas. In the late seventies and in the late eighties, two murder cases resulted  
38 in the arrest of several Mundas in Tapu who were tortured by the police - their feet were  
39 whipped and their families were crippled by the incurred legal costs. The other significant  
40 experience of the state was excise officers, who local people associated with the police, and  
41 who came to the village to beat those selling rice beer and *mahua* wine. In Tapu alcohol was  
42 important for every Munda festival and family ritual occasion and each Munda household  
43 brewed rice beer and *mahua* wine for domestic consumption. While this domestic  
44 consumption was not prohibited in Jharkhand, the sale of alcohol was. Inevitably, everybody  
45 sold excess created from domestic consumption (and especially at the time of festivals) to  
46 needy neighbours. Thus, crackdowns on the sale of alcohol by excise officers drove the fear  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 of the state into every single Munda household. This fear was further enhanced when one  
4  
5 person was jailed for several years. The result, unsurprisingly, was that the state was seen by  
6  
7 *adivasis* as part of an ‘outside and foreign’ world: dangerous, unpredictable and best kept  
8  
9 away from. Indeed, a common term used by *adivasis* to describe *sarkar* was ‘*soccion*’  
10  
11 (exploitation).  
12  
13

14  
15  
16  
17 In recent years the state was seen as becoming increasingly sophisticated in its ability to  
18  
19 exploit *adivasis* and this was evident in its most recent camouflage as block officers who  
20  
21 were seen to disguise their destructive capacity in a language of ‘acting in the interest of the  
22  
23 poor’ (see Shah, 2007). As such, *adivasis* rarely showed interest in ration cards which would  
24  
25 enable access to government subsidised provisions and in being on ‘Below Poverty Line’  
26  
27 (BPL) lists for state development schemes. Where *adivasis* accepted state resources, closer  
28  
29 investigation demonstrated that it was often under the influence of village elites. In fact, and  
30  
31 most strikingly, in these circumstances they often believed that the resources came not from  
32  
33 the state but from the elites themselves. For instance, the women in Sumani’s factory were  
34  
35 unaware that they were the beneficiaries of a state-run DWCRA programme. Instead, they  
36  
37 saw themselves as labourers in Sumani’s factory. In other cases, albeit always through the  
38  
39 encouragement and mediation of the rural elites, *adivasis* sometimes accessed state resources  
40  
41 for what they saw as compensation for damage created by the state.  
42  
43  
44  
45  
46  
47  
48  
49

50  
51 As such many *adivasis* idealised a former time when, in the absence of *sarkar*, *adivasis*  
52  
53 society had been stronger - a time of the *parha*, an *adivasi* sacral-polity, a sovereign  
54  
55 structure, which consisted of groups of 12 to 21 villages, ruled by a *parha raja* at the inter-  
56  
57 village level, and at a village level, by local functionaries called *pahans* and *paenbharas*.  
58  
59 This sacral polity was responsible for resolving all disputes, embodied a non-self-interested,  
60

1  
2  
3 non-divisive and moral politics endorsed by the spirits (Shah 2007), and was fundamentally  
4 underpinned by the values of egalitarianism, consensus in decision making, reciprocity and  
5 mutual aid. In contrast to *sarkar* as a destructive source, the *parha* was imagined as an  
6 alternative, authentic, *adivasi* political vision. In recent years this vision of the *parha* has  
7 been revitalised by local Members of Legislative Assembly who, as I argue elsewhere (Shah  
8 2007), endeavour to win the *adivasi* vote by promising to keep the state away and instead  
9 resurrect the *parha*. The *parha* was seen as the essence that united and protected *adivasis* –  
10 an essence that had, in recent years, been weakened by *sarkar*. For instance, a common  
11 example of the weakening of the *parha* was the rise of the modern courts that were  
12 expensive, controlled by cheating outsiders who lacked spiritual legitimacy and undermined  
13 the consensus generating dispute solving function of the *parha*. Many Mundas attributed the  
14 waning strength of the *parha* sacral polity in recent years to the waxing power of *sarkar*.

33  
34 Some of the younger generation, to whom I will return, educated and aspiring to join the  
35 village elites, had more contradictory understandings of *sarkar* and often looked down on the  
36 ideas of their relatives and parents, attributing them to ‘illiteracy’. Their kin, however,  
37 explained the youth’s disenchanted attitudes as further evidence of *sarkar*’s increasing power  
38 to mislead the new generations. In fact, many explained that by grabbing those who engaged  
39 with it, *sarkar* brought an amoral, self-interested politics into village life, further dividing it.

Given a choice, *adivasis* ex-tenant descendents preferred to have nothing to do with the state  
and its officials. Fearful of the state, they preferred to leave contact with the state to the  
*zamindar* descendants. They rarely acquired the kinds of detailed knowledge of state  
operation that some members of the rural elites accumulated, and furthermore, cared little this  
was the case. There was good reason to see why the state is beyond the moral pale for the

1  
2  
3 *adivasis*. A historically/and colonially based political economy has marginalised *adivasis* and  
4 explains *adivasis* morality vis-à-vis the state.

### 10 **Ideas of morality as underpinned by a political economy**

11

12  
13  
14  
15 *Adivasi* perceptions of the state were underpinned by the above historical and material  
16 reasons but also a contemporary political economy in which village elites and local state  
17 officials acted as mediators reproducing and reinforcing *adivasi* imaginations of the state.<sup>11</sup>  
18  
19 As Nuijten (2003) argues, brokers play a role in the fantasies of state power (c.f. Bailey,  
20 1969: 169; Collier, 1976). Block officers and local elites needed each other to capture state  
21 resources and both needed to limit the pool of contractors: village elites wanted to secure  
22 outcomes and block officers did not want to disappoint contending contractors or their  
23 political patrons who could hold some leverage over officers and also wanted to enhance the  
24 conditions for the trust-building necessary to ensure that the bribe-giver would pay. The  
25 number of contractors are most easily limited if people would not consider becoming  
26 contractors in the first place. This was enabled by a reproduction of the discourse that the  
27 state is so alien and malign that the *adivasis* would not want anything to do with it. It is in the  
28 interest of the village elites to performatively reinforce (even exaggerate) the idea that the  
29 state is totally corrupt – the discourse of corruption is itself an important weapon for the rural  
30 elites.  
31  
32

44  
45  
46  
47  
48  
49  
50

51  
52  
53 *Adivasis* trying to access land revenue documents, caste certificates, or signatures from  
54 officers were given an endless run around until it was eventually ‘proven’ to them that they  
55 needed their village patron to get the job done. Performative dimensions of village elites  
56 reinforcing *adivasi* understandings of the state are described elsewhere (Shah, 2007), but let’s  
57  
58  
59  
60

1  
2  
3 take here the example of Wahib, a Muslim tenant descendant in Tapu, whose house was  
4 destroyed one night by three wild elephants. Neel, a *zamindar* descendent, convinced Wahib  
5 that he should acquire state compensation. But the forest officers threw the compensation  
6 application, written by Neel, in Wahib's face. Neel's uncle laughed at Wahib's attempts,  
7 asking him if officers could be expected to treat the poor otherwise. He said that only some  
8 people had leverage over these officers. Neel's uncle was known to 'wine and dine' the  
9 officers and Wahib thus let him deal with the application, eventually receiving a cheque from  
10 which the uncle took a cash percentage for some officers and cash for a new suit for himself.  
11

16  
17  
18  
19  
20  
21  
22  
23  
24

25 While some of the *zamindar* descendants would quite willingly joke to me about the stupidity  
26 of *adivasi* beliefs about the state, in front of them they would perpetuate the notion of an  
27 exploitative monolith it was better to stay away from. They realised that the discourse of state  
28 exploitation was an important narrative to reinforce and even exaggerate. Capturing the local  
29 economy of the Block Office was more easily enabled by creating a network of personalistic  
30 ties between state officers and village elites from which others were excluded. This  
31 'blocking' was enabled by taking every opportunity to stress the cultural differences between  
32 honest, innocent, ignorant, illiterate, insiders (the ex-tenants) and corrupt, exploitative  
33 outsiders (the state and its agents). Keeping others misinformed about the roles of the state  
34 was key to controlling state resources. Control of state resources by the officers and village  
35 elites was based thus on control of both the idea of the state as functioning for the public  
36 good as well as the localised practices of the state. Part of the reason that *adivasis* today  
37 continue to hold the moral view of the state as irredeemably foreign and to be kept away from  
38 is the result of a localised political economy in which it has been in the interest of other  
39 villagers to propagate and reinforce such a view.

### Transforming political economy: transforming moral economy?

1  
2  
3  
4  
5  
6  
7  
8 These different localised understandings of the state, as well as their reproduction, hold  
9 important implications for development policy. In recent years, participation and  
10 decentralisation have been major buzzwords targeted to make development more democratic,  
11 more likely to reach the poorest and to decrease corruption. However, because these tend to  
12 treat the localised community and its moral economy as homogenous, there can be little  
13 assurance that people will really be better served. The community and moral economy is  
14 differentiated and dominant local interests effect changes over time in their own interest,  
15 shaping the way in which development programmes are implemented locally (c.f. Corbridge  
16 and Kumar, 2002). In this context, it is more likely that changes to local class structures, as a  
17 result of a shift in the localised political economy, will effect changes in *adivasi* morality vis-  
18 à-vis the state, rather than initiatives that encourage decentralisation and/or participation per  
19 se.  
20  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31  
32  
33  
34  
35  
36  
37  
38

39 Indeed, in recent years there is evidence that things are slowly changing as greater numbers  
40 of *adivasis* have sought to enjoy middle class lifestyles and village elite status. The seeds of  
41 these changes were evident in the pre-independence period when Christianisation of *adivasis*  
42 increased their access to education and led to the emergence of a small tribal middle class –  
43 that was in fact responsible for the fight for the separate state of Jharkhand (c.f Corbridge,  
44 2000; Das, 1992). More recently, even in villages like Tapu that have remained on the  
45 margins of the state, parents were beginning to send their children to school, in part because  
46 of increased opportunity to do so created by government reservations for people of Scheduled  
47 Tribe and Scheduled Caste descent (c.f. Corbridge, 2000). Indeed, whilst in much of the Bero  
48 area, this expansion of the developmental state has had, as might have been expected, a  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 disproportionately beneficial effect for the rural elites, it has offered some *adivasis*,  
4  
5 previously confined to village and kinship based networks, the opportunity to move out into  
6  
7 the previously 'foreign' world of the state and the middle class. In so doing, this emerging  
8  
9 middle class has begun to view society in new ways and to understand both the idea and the  
10  
11 practices of the state.<sup>12</sup> Whilst the majority of *adivasis* in Tapu retain the understandings I  
12  
13 have discussed, an emerging transformation is evident among no more than a handful of  
14  
15 younger Mundas, and is resonated in the politics of state contractorship in the village.  
16  
17  
18  
19  
20  
21

22 The first Block Development Office scheme was implemented in the village in 1996 and has  
23  
24 been followed by one every year thereafter. While there were always tactical battles among  
25  
26 potential contractors, until 2001 all the elected contractors were *sadan* men. In the last few  
27  
28 years, however, these elections have precipitated increasingly fraught conflict between a few  
29  
30 young educated Munda men on the one hand and the *zamindar* descendants on the other. The  
31  
32 young Mundas, unlike their parents, have escaped the essentialised view of the state as  
33  
34 something to be feared. This is a result of the *process* of their school and college education,  
35  
36 which has given them opportunities to understand the state and its agents in different ways.  
37  
38  
39  
40  
41  
42

43 Ironically, a brief trip to the Bero area between January and March 2007 revealed how it is  
44  
45 now in the interest of Tapu *ex-zamindars* to leave the 'dirty' politics around state  
46  
47 development schemes to the new generation of Munda youth. By 2007 many *zamindar*  
48  
49 descendants found other means to diversify their livelihoods - Neel had received  
50  
51 contractorship of the village Public Distribution System shop. Moreover, the Bero area saw  
52  
53 the expansion of the underground left wing Marxist-Leninist-Maoist inspired guerrilla  
54  
55 movement, commonly called the Naxalites, who are expanding, as I have argued elsewhere  
56  
57  
58  
59  
60 (Shah, 2006), through offering better protection to village elites involved in the informal

1  
2  
3 economy of state resources, thus blurring the boundary between the ‘terrorist’ and the state.  
4  
5 In the context of the increase of fear, suspicion and a more violent atmosphere accompanying  
6  
7 the greater influence of the Naxalites, some village elites who want to avoid the Naxalites,  
8  
9 are now feeling that perhaps it might be better to leave state development contractorships to  
10  
11 the new generation of Munda youth.  
12  
13

14  
15  
16  
17 But as an emergent *adivasi* class enters the spheres of the state, many more are left feeling  
18  
19 that this is further evidence of the state’s malign strength. Parents, for example, who used to  
20  
21 strongly disapprove of their son’s involvement in state activities now see the dangers of the  
22  
23 state in many more forms – including the Naxalites. They, like many *adivasis* more generally,  
24  
25 retain the belief that the state corrupts individuals and weakens *adivasi* society. And one  
26  
27 result is that their belief in the alternative sovereign structure, the *parha*, strengthens.  
28  
29  
30  
31  
32  
33  
34  
35

### 36 **Concluding remarks**

37  
38  
39  
40  
41 In the last two decades, we have seen the rise of what has been termed a ‘culturalist critique’  
42  
43 (Fuller and Harris, 2001) of the Indian State which argues that the notion of the postcolonial  
44  
45 state in India is an alien ideology that some of its citizens will necessarily culturally  
46  
47 misunderstand. An influential line of thought sees the ‘failure’ of the postcolonial state as  
48  
49 India’s ‘natural’ rejection of imposed social change and, furthermore, as evidence of a  
50  
51 broader pattern inherent in India’s experiments with modernism. The most extreme  
52  
53 proponents of this argument are Nandy (1998) and Madan (1997) who believe that a  
54  
55 Westernised elite imposed alien secular Western institutions over ordinary people who  
56  
57 considered religion as the determining principles by which social conduct should be  
58  
59  
60

1  
2  
3 governed. Variants of this argument, albeit less historically and culturally reductionist, are  
4 implied in the work of Kaviraj (1984; 1991; 1997), but also Chatterjee (2004), who following  
5 Gramsci argue that the form of the western liberal postcolonial state exported for India by its  
6 modernising bourgeoisie was unintelligible for its subaltern populations at the time of  
7 Independence. Social transformation was not driven from within society but was a function of  
8 domination attempted through a state-bureaucratic agency and a 'passive revolution' that  
9 substituted planning for political reform (Kaviraj 1984: 225-227; 1991: 80).

10  
11  
12 In this vein of argument, Chatterjee (2004) has pointed out that many popular terms used to  
13 describe everyday localised practices of governance, such as 'civil society', are really  
14 categories of a bourgeois political order which are extremely limited in much of the non-  
15 Western world. In India, it does not make sense to insist on localised practices to respect the  
16 rule of law, equality of law, protection of private property, freedom of contract, because most  
17 people are not bourgeois and just do not negotiate claims to the modern state in this way. He  
18 suggests instead, a term, 'political society', to describe the way in which localised subjects  
19 operate on a set of norms which are often quite contrary to what the larger principles of  
20 governance would dictate.

21  
22  
23 This article has shown the shades and textures of this political society in relation to the  
24 debates around corruption, morality and the state, from the localised perspective of the actors  
25 concerned. Understanding this 'political society' is important because we are faced with an  
26 increasingly powerful international development discourse condemning corruption in the  
27 developing world. The need to understand people's moral reasoning about actions which  
28 some would consider corrupt in their own terms is pressing if we are to get away from the  
29 idea of corruption as some how pathological. In the Jharkhand case, a number of interrelated

1  
2  
3 points emerge: First, monetary aspects of ‘corrupt’ activities may be eclipsed by a whole  
4 range of other motivations, governed by a set of moralities, for engaging in those activities.  
5  
6 As noted long ago by Thompson (1971) and Scott (1979), economic action is governed by a  
7  
8 pattern of moral rights or expectations. Second, moral reasoning about corruption might itself  
9  
10 be a tool through which potential opponents are fought off. Third, the institutional dualism at  
11  
12 the heart of moralistic good governance discourses on corruption, forcing people to separate  
13  
14 personal agency from the state, might well be less honest than an open acknowledgement of  
15  
16 their interdependence (c.f. Hart, 2005). While it might be accepted that the idea of the state  
17  
18 should be impersonal in order to serve the greater common good, it is also accepted that the  
19  
20 state after all consists of real people doing things to and with each other and who are often  
21  
22 designing policies and development schemes without having any idea about their relevance  
23  
24 for the people they should allegedly serve. Fourth, the moral set up of everyday life does not  
25  
26 necessarily agree with official or dominant rules and moralities. Fifth, what is legal is not  
27  
28 necessarily that which is the most legitimate. Often, the violations of state norms may be  
29  
30 determined by their perceived inadequacy to live up to the idea of the state as a public body  
31  
32 working on behalf of the common good.  
33  
34  
35  
36  
37  
38  
39  
40  
41  
42

43 While understanding ‘political society’ is important, the Jharkhand case crucially warns  
44  
45 against a promotion of culturalist arguments about corruption – for example, different  
46  
47 cultures perceive economic practices in different ways. Instead, we need to understand the  
48  
49 complex interrelationships between how people reason about their ‘corrupt’ practices in the  
50  
51 wider socio-economic context of understandings of the state, and the multivarious moral and  
52  
53 political economy determining social action. ‘Political society’ in rural Jharkhand is  
54  
55 differentiated and has neither a uniform nor a hegemonic moral economy. A fine-grained  
56  
57 analysis unravels different moral economies and a majority of the rural poor, primarily  
58  
59  
60

1  
2  
3 *adivasis*, who want nothing to do with the state, do not accept the idea of the state as acting  
4  
5 for the public good, and do not get involved in knowing about the practices of the state, and  
6  
7 resurrect an alternative sovereignty, a *parha* sacral-polity. These are not merely cultural  
8  
9 imaginings of the state but result from a political economy of historical experience of the  
10  
11 state as well as ideas encouraged by the village elites in whose interests it is to promote the  
12  
13 idea of the state as alien, dangerous and so beyond the moral pale that *adivasis* ought not to  
14  
15 engage with it. Perpetuating such views of the state, the rural elites are better able to block  
16  
17 the rural poor from interacting in the public sphere and the moral economy of state  
18  
19 development schemes on the same terms as they interact. Ideas of morality in this instance  
20  
21 are also historically constituted, managed and reproduced.  
22  
23  
24  
25  
26  
27  
28

29 The Jharkhand analysis leaves open two possible future trajectories for *adivasi*-state relations  
30  
31 which may of course run parallel to each other. The first is a continued rejection of the state  
32  
33 and a sustained *adivasi* movement to resurrect the sacral polity of the *parha*. The second is a  
34  
35 transforming political economy: as is evidenced in rural Jharkhand with the emergence of a  
36  
37 new class of *adivasi* youth aspiring to join the rural elites, which in turn impacts a  
38  
39 transforming moral economy.

29 <sup>1</sup> The focus here is on 'bottom-rung', 'petty' or 'retail' corruption though this should not prevent from  
30 considering the arguments here in the context of more major corruption.

31  
32 <sup>2</sup> Jharkhand is known for one of the oldest autonomy movements in India with the first demands for a separate  
33 State within India made in 1928. The struggle for autonomy initially revolved around the idea that the culturally  
34 autonomous indigenous people, or *adivasis*, were exploited and oppressed by the high caste Hindu governments  
35 that had ruled them from Bihar and was initially the product of Christian converted *adivasis* (Devalle, 1992;  
36 Singh, 1966). By 1999, one of the peaks of the Jharkhand movement, it had a wider support from educated non-  
37 Christian *adivasis* (mainly urban based). In the Tapu area, however, as I have argued elsewhere (Shah  
38 forthcoming), when I arrived to live there in 2000, only weeks after the state had been formed, most *adivasis* not  
39 only did not know of these significant political changes, but also did not care.

47

48 <sup>3</sup> In Jharkhand panchayati elections have not been held since 1978 meaning that the Block Office is responsible  
49 for the design and implementation of development plans at the village level.  
50

51 <sup>4</sup> All names of people and villages are pseudonyms.  
52

53 <sup>5</sup> The percentages are fixed slightly differently for different schemes.  
54

55 <sup>6</sup> Corbridge et al estimate that fund leakage from Employment Assurance Schemes in Bihar is between 30-35 %  
56 of the total flow of funds (Corbridge et al., 2005:166).  
57  
58

59 <sup>7</sup> I do not have exact information on the way this dependence works in the Bero Block Office, but Robert  
60 Wade's (1982; 1985) model of the corruption-transfer mechanism in Andhra Pradesh provides relevant pointers.

---

<sup>8</sup> In some of the literature such young men are described as ‘unemployed’ or ‘*berozgar*’ (c.f. Heuze, 1996; Jeffrey et al., 2002). In Bero, while these men may sometimes classify themselves to outsiders as *berozgar*, they also see networking as a form of employment.

<sup>9</sup> The transaction is always depicted as one of things but it is often money that transfers hands.

<sup>10</sup> Parry, personal communication. See also Hardiman (1987: 76) and Mosse (2005: 51).

<sup>11</sup> As in Brass’s description of police action in Uttar Pradesh, that it is not only a simple case ‘of the agents of the state misusing their powers against innocent persons, but a social system in which all are engaged in such actions,’ (Brass, 1997:274).

<sup>12</sup> In fact, in many other areas of India, the activities of the modern development state have enabled power structures of the village to change (c.f. Gupta, 1998; Wadley, 1994).
