1 The International Social Survey Programme

The International Social Survey Programme (ISSP) is a continuing annual programme of cross-national collaboration. It brings together pre-existing social science projects and coordinates research goals, thereby adding a cross-national perspective to the individual national studies.

It started late in 1983 when SCPR,¹ London, secured funds from the Nuffield Foundation to hold meetings to further international collaboration between four existing surveys - the **General Social Survey (GSS)**, conducted by NORC in the USA, the **British Social Attitudes Survey (BSA)**, conducted by SCPR in Great Britain, the **Allgemeine Bevölkerungsumfrage der Sozialwissenschaften (ALLBUS)**, conducted by ZUMA in West Germany and the **National Social Science Survey (NSS)**, conducted by ANU in Australia. Prior to this, NORC and ZUMA had been collaborating bilaterally since 1982 on a common set of questions.

The four founding members agreed to (1) jointly develop modules dealing with important areas of social science, (2) field the modules as a fifteen-minute supplement to the regular national surveys (or a special survey if necessary), (3) include an extensive common core of background variables and (4) make the data available to the social science community as soon as possible.

Each research organisation funds all of its own participation costs. There are no central funds. The merging of the data into a cross-national data set is performed by the Zentralarchiv für Empirische Sozialforschung, University of Cologne. Since 1996, the archive has been aided in its work by ASEP, one of the Spanish member institutes in the ISSP. ZUMA compiles the study monitoring reports for the ISSP and provides the study monitoring questionnaires.

In 2006, the ISSP has 41 members; the founding four - Australia, Germany, Great Britain and the United States - plus Austria, Belgium, Brazil, Bulgaria, Canada, Chile, Croatia, Cyprus, the Czech Republic, Denmark, The Dominican Republic², Finland, France, Hungary, Ireland, Israel, Japan, Korea (South), Latvia, Mexico, the Netherlands, New Zealand, Norway, the Philippines, Poland, Portugal, Russia, Slovakia, Slovenia, South Africa, Spain, Sweden, Switzerland, Taiwan, Turkey, Uruguay, and Venezuela.

¹ Today SCPR is NatCen (National Centre for Social Research).

² Member since 2006

The annual topics for the ISSP are developed over several years by a sub-committee and are pre-tested in various countries. The annual plenary meeting of the ISSP then adopts the final questionnaire. ISSP questions need to be relevant to all countries and expressed in an equivalent manner in all languages. The questionnaire is drafted in British English and then translated into other languages.

The ISSP is unique in a number of ways. First, the cross-national collaboration between organisations is not *ad hoc* or intermittent, but routine and continual. Second, while necessarily more circumscribed than collaboration dedicated solely to cross-national research on a single topic, the ISSP makes cross-national research a basic part of the national research agenda of each participating country. Third, by combining a cross-time with a cross-national perspective, two powerful research designs are being used to study societal processes. The ISSP is also one of the few cross-national studies to conduct and publish study monitoring reports of the annual studies. These are appended to the relevant codebooks and are downloadable from the archive web pages. Other projects, such as the European Values Study have, in fact, adapted the ISSP study monitoring questionnaire for their projects.

2 Archiving of Work Orientations III Datasets

In order to be officially archived member countries need to deliver data sets to the archive along with a study monitoring description sheet, deliver a study monitoring report (SMQ) to ZUMA and, if any difficulties are noted in the SMQ, have these resolved.

3 ISSP Modules 1985-2008

1985	Role of Government I	Attitudes towards the government plus general political attitudes.
1986	Social Networks I	Ego-centred network survey in the Claude Fisher tradition ("to whom would you turn") plus a series of questions concerning the structure and composition of respondents' networks.
1987	Social Inequality I	Opinions and attitudes toward inequality in terms of rich and poor and privileged and underprivileged.
1988	Family and Changing Gender Roles I	Attitudes towards women as part of the labour force and possible conflicts with traditional roles of men and women in society, general attitudes to the family.
1989	Work Orientations I	General attitudes to work and leisure, work organisation and work content.
1990	Role of Government II	Replication of the main topics of Role of Government I (1985).
1991	Religion I	Attitudes towards traditional religious beliefs and topics now connected with secular social ideologies.
1992	Social Inequality II	Replication of the main topics of Social Inequality I (1987).
1993	Environment I	Attitudes to the environment, nature and pollution, together with questions assessing knowledge of science and environmental issues.
1994	Family and Changing Gender Roles II	A partial replication of Family and Changing Gender Roles I (1988), with new questions.
1995	National Identity I	Questions on attitudes to aspects of national life and culture, citizenship, minorities in society and to foreigners.
1996	Role of Government III	A partial replication of Role of Government II (1990), one third new.
1997	Work Orientations II	A partial replication of Work Orientations I (1989), one third new.
1998	Religion II	A partial replication of Religion I (1991), with new questions.
1999	Social Inequality III	A partial replication of the Social Inequality modules from 1987 and 1992, with new questions.
2000	Environment II	A partial replication of Environment I (1993), with new questions.
2001	Social Networks II: Social Relations and Support Systems	Based on Social Networks I (1986), with new questions.
2002	Family and Changing Gender Roles III	A partial replication of Family and Changing Gender Roles II (1994), with new questions.
2003	National Identity II	A partial replication of National Identity I (1995), with new questions.
2004	Citizenship I	A new module.
2005	Work Orientations III	A partial replication of Work Orientations II (1997), with new questions.
2006	Role of Government IV	A partial replication of Role of Government III (1996), with new questions.

Modules planned

2007	Leisure Time and Sports I	A new module (module finalised).
2008	Religion III	A partial replication of Religion II (1998), with new questions (in preparation).
2009	Social Inequality IV	A partial replication of the Social Inequality modules from 1987, 1992, and 1999; with new questions.

4 Contents of the Work Orientations III Module

The 2005 module was a partial replication of the 1997 and 1989 Work Orientation module. The replications and new questions are explained in Table 1. ISSP modules are developed over a minimum period of two years during which a multi-national drafting group prepares several questionnaire drafts in accordance with the decisions taken at general assembly meetings. These drafts are circulated to ISSP members for input and commentary. A final draft version is discussed and signed off at the general assembly meeting prior to the year of fielding.

The members of the drafting group for Work Orientations 2005 were Israel (convenor), Germany, Hungary, Japan, South Africa, and Venezuela.

The table below outlines the topics covered in the module and indicates which were new and which were replicated. The questionnaire item numbers are given in the first column. If different, the German questionnaire numbers are included in brackets. The variables in the second column are those of the international data set.

* 1989 wording differs from 1997 and 2005 wording

** V27 constructed from ALLBUS 2006 occupational status (F56 and F58) and question on parental leave: "Currently working" in ISSP 2005 refers to both self-employed and employees, and should also include persons on leave if they are in an employment relationship. Thus, filter question 8 in German ISSP 2005 questionnaire does not ask again for employment but explicitly asks whether respondent is on parental leave or not .

5 The German Module

The study description sheet below was submitted to the archive with the 2005 data. We expand somewhat on the information contained in this in sections which follow. A detailed questionnaire on the 2005 fielding was completed by ISSP members, including Germany, in 2005 and 2006 and will be available in 2006 on the GESIS web site.

Table 2: ISSP Study Description Form: 2005 GERMANY

Study Title:	ISSP 2005 Germany – Work Orientations III			
Fieldwork Dates:	18.3.2006-21.8.2006			
Principle Investigator:	Prof. Dr. Peter Ph. Mohler			
Sample Type:	Two stage random sample. Names and addresses from registers of inhabitants kept by municipalities. Adults of 18 and older living in private accommodation.			
Fieldwork Methods:	Self-completion questionnaire (CASI), interviewer in attendance. Background variables were asked face-to-face (CAPI).			
Context of ISSP Questionnaire:	Self-completion questionnaire (CASI) following on from a 45 minutes face-to-face CAPI interview (ALLBUS 2006). ISSP 2005 fielded in split with ISSP 2006.			
Sample Size:	1701 (ISSP 2005 and ISSP 2006 were fielded in split together with ALLBUS 2006, the German General Social Survey; number of ALLBUS 2006 interviews: 3421; number of ISSP 2006 interviews: 1643)			
<i>Response rates:</i> Real numbers for (W) western and (E) eastern states	N=4625	W=3196	E=1429	A - Total issued (total sample)
	N=484	W=352	E=132	B - Ineligible (address vacant, wrong ages,...)

	N=1914	W=1341	E=573	F - Refusals (refusing to take part)
	N=267	W=192	E=75	G - Non-contact (never contacted)
	N=259	W=197	E=62	H - Other non-response*
				* (incapacitated; no result during fieldwork time)
Language:	German			
Weighted (yes/no):	No			
Weighting Procedure:	Sample for eastern Germany deliberately over-samples the five eastern federal states. If all of Germany is taken as the unit of analysis (rather than the eastern and western states) weighting is necessary. Weighting factor for Western Germany: 1,244986*; weighting factor for Eastern Germany: 0,535069*; recoding of the country variable V3 is necessary: <i>recode V3(2=3).</i> <i>add values labels V3 3 'Germany'.</i>			
Known Systematic Properties in Sample:	None for the total sample			
Deviations from ISSP Questionnaire:	ISSP substantive questionnaire: no deviations; Background variables: no deviations			
Publications:	ALLBUS Methods Report 2006 (forthcoming); ISSP 2006 Methods Report on the German Study (forthcoming) For further information see ISSP bibliography on the ISSP homepage (http://www.issp.org/biblio.htm)

5.1 Translation of the Source Questionnaire

Two independent translations were made of the new questions in the module, one by a translation expert and one by a member of the ISSP team. These were discussed in a group meeting with members of the ISSP team and members of the ZUMA cognitive testing laboratory. A translation expert finally checked the quality of the group's decisions. After the pre-test, a few changes were made to the translation.

One translation problem is related to replication questions in the source questionnaire. The usual way to deal with replicated wording is to use the former German translations. In the 2005 Work Orientations module, a test on differences in wording was integrated. The test refers to the wording of one of the extreme categories of the Likert-scale on agreement/disagreement. In the first split, the more up-to-date wording „stimme voll und ganz zu“ was asked, the second split replicates the wording used in the former modules „stimme stark zu“. Systematic differences between the two splits could not be detected. More details about the experiment will be reported separately.

5.2 Sample

The ISSP modules for 2005 (Work Orientations) and 2006 (Role of Government) were fielded together with the ALLBUS 2006 study in a split. The ALLBUS sample in 2006 was designed to yield a representative sample of the adult population (18 years and older) living in private accommodation in Germany, including foreigners able to complete the questionnaire in German. The sample was drawn in a two-stage design from official registers of inhabitants kept by municipalities throughout Germany. First the communities and sample points were selected randomly and then named individuals randomly selected from each sampling point. Full details of the sample are presented (in German) in the methods report on ALLBUS 2006 (Wasmer et al., forthcoming).

5.3 Pre-testing

Pre-testing for translated versions of source questionnaires differs from pre-testing of questionnaires which do not yet have a finished form. Irrespective of what a pre-test of a translation seems to indicate, only a limited number of changes can be made if the source questionnaire has been finalised. The ordering of questions can usually not be changed, nor

the format of questions or response categories, since these changes raise issues of comparability.

Pre-testing in the sense of a 'trial run' can indicate how long administration can take, highlight lay-out problems, and to some extent, point to difficulties in comprehension related to translation. In our experience with translated questionnaires, cognitive pre-testing provides more directly useful information. In an ask-the-same-question approach, changes of these kinds have to be made while the source questionnaire is still being developed and tested.

Germany was member of the drafting group and conducted a cognitive pre-test during the development of the 2005 Work Orientations module to probe comprehension of key topics and new questions (Prüfer and Rexroth, 2004). A second pre-test was conducted after the source questionnaire had been finalized and translated to test for various problems of the CASI (Computer assisted self interview) interview (Prüfer and Rexroth, 2005). CASI mode was used for the first time to field a German ISSP module.

5.4 Fielding and Response

Fielding began on March 18th 2006 and ended on August 21st 2006. The ISSP module was a self-completion questionnaire (CASI) administered at the end of the ALLBUS CAPI interview. A total of 1701 questionnaires were completed for the module (1114 in western states; 587 in eastern states). 98.2 % of ALLBUS respondents agreed to complete the ISSP module. The total ALLBUS response rate was 41.0 % (40.2 % in western states; 42.8 % in eastern states). Based on the ALLBUS response calculation, the response rate for the ISSP 2005 was 41.1 % (39.2 % in western states; 45.3 % in eastern states). While ISSP modules are designed as self-completion questionnaires, 26.6 % of the cases were administered as interviews for various reasons (30.1 % in western states; 20.1 % in eastern states)³.

³ Figures based on question regarding mode of interview (either self-completion by respondent or completion by interviewer) answered by the interviewer. Information regarding mode of interview integrated in question on how happy the respondent was with the CASI mode (question dedicated to the respondent) differs: 21.3% (24.0% in western states; 16.4% in eastern states).

5.5 Data Editing and Occupational Coding (ISCO 1988)

The fielding institute delivered a formally edited data set to ZUMA. ZUMA carried out additional data editing and prepared the data for merging in accordance with the ISSP 2005 set-up from the ISSP archive. Coding of current or former occupation was also carried out at ZUMA (ISCO 1988; for details of ISCO 1988, see, for example, International Labour Office, 1990).

6 Data Availability

The data were deposited to the Central Archive for Empirical Social Research at the University of Cologne, the official ISSP archive since 1986. Together with *Análisis Sociológicos, Económicos y Políticos* (ASEP), Madrid, the archive is responsible for merging the ISSP data and producing the international merged data sets.

The Questionnaires (English and German)

The numbering of the German questionnaire differs slightly from the English. Filter questions were asked as separate questions and not as part of the substantive questions. Obligatory background variables not included in the self-completion questionnaire were asked in the ALLBUS survey which preceded the ISSP module. A documentation of the construction of the ISSP 2005 background variables will be available online with the ISSP 2005 international data file.
