1 The International Social Survey Programme

The International Social Survey Programme (ISSP) is a continuing annual programme of cross-national collaboration. It brings together pre-existing social science projects and co-ordinates research goals, thereby adding a cross-national perspective to the individual national studies.

It started late in 1983 when SCPR,¹ London, secured funds from the Nuffield Foundation to hold meetings to further international collaboration between four existing surveys - the **General Social Survey** (GSS), conducted by NORC in the USA, the **British Social Attitudes Survey** (BSA), conducted by SCPR in Great Britain, the **Allgemeine Bevölkerungsumfrage der Sozialwissenschaften** (ALLBUS), conducted by ZUMA² in West Germany and the **National Social Science Survey** (NSS), conducted by ANU in Australia. Prior to this, NORC and ZUMA had been collaborating bilaterally since 1982 on a common set of questions.

The four founding members agreed to (1) jointly develop modules dealing with important areas of social science, (2) field the modules as a fifteen-minute supplement to the regular national surveys (or a special survey if necessary), (3) include an extensive common core of background variables and (4) make the data available to the social science community as soon as possible.

Each research organisation funds all of its own participation costs. There are no central funds. The merging of the data into a cross-national data set is performed by GESIS². Since 1996, the archive has been aided in its work by ASEP, one of the Spanish member institutes in the ISSP. GESIS compiled the study monitoring reports for the ISSP until ISSP 2007 and still provides the study monitoring questionnaires.

In 2011, the ISSP has 48 members; the founding four - Australia, Germany, Great Britain and the United States - plus Argentina, Austria, Belgium, Bulgaria, Canada, Chile, China, Croatia, Cyprus, the Czech Republic, Denmark, The Dominican Republic, Estonia, Finland, France, Hungary, Iceland, Ireland, Israel, Italy, Japan, Korea (South), Latvia, Lithuania, Mexico, the Netherlands, New Zealand, Norway, Palestine, the Philippines, Poland, Portugal, Russia, Slovakia, Slovenia, South Africa, Spain, Sweden, Switzerland, Taiwan, Turkey, Ukraine, Uruguay, and Venezuela.

The annual topics for the ISSP are developed over several years by a drafting group and are pre-tested in various countries. The annual plenary meeting of the ISSP then adopts the final questionnaire. ISSP questions need to be relevant to all countries and expressed in an equivalent manner in all languages. The questionnaire is drafted in British English and then translated into other languages.

The ISSP is unique in a number of ways. First, the cross-national collaboration between organisations is not *ad hoc* or intermittent, but routine and continual. Second, while necessarily more circumscribed than collaboration dedicated solely to cross-national research on a single topic, the ISSP makes cross-national research a basic part of the national research agenda of each participating country. Third, by combining a cross-time with a cross-national perspective, two powerful research designs are being used to study societal processes. The ISSP is also one of the few cross-national studies to conduct and publish study monitoring reports of the annual studies. These are appended to the relevant codebooks and are downloadable from the archive web pages. Other projects, such as the European Values Study have, in fact, adapted the ISSP study monitoring questionnaire for their projects.

¹ In 1999 SCPR became NCSR (National Centre for Social Research).

² In 2007 ZUMA and Zentralarchiv were integrated into GESIS and became GESIS departments.

2 ISSP Modules 1985–2014

1985	Role of Government I	Attitudes towards the government plus general political attitudes.
1986	Social Networks I	Ego-centred network survey in the Claude Fisher tradition ("to whom would you turn") plus a series of questions concerning the structure and composition of respondents' networks.
1987	Social Inequality I	Opinions and attitudes toward inequality in terms of rich and poor and privileged and underprivileged.
1988	Family and Changing Gender Roles I	Attitudes towards women as part of the labour force and possible conflicts with traditional roles of men and women in society, general attitudes to the family.
1989	Work Orientations I	General attitudes to work and leisure, work organisation and work content.
1990	Role of Government II	Replication of the main topics of Role of Government I (1985).
1991	Religion I	Attitudes towards traditional religious beliefs and topics now connected with secular social ideologies.
1992	Social Inequality II	Replication of the main topics of Social Inequality I (1987).
1993	Environment I	Attitudes to the environment, nature and pollution, together with questions assessing knowledge of science and environmental issues.
1994	Family and Changing Gender Roles II	A partial replication of Family and Changing Gender Roles I (1988), with new questions.
1995	National Identity I	Questions on attitudes to aspects of national life and culture, citizenship, minorities in society and to foreigners.
1996	Role of Government III	A partial replication of Role of Government II (1990), one third new.
1997	Work Orientations II	A partial replication of Work Orientations I (1989), one third new.
1998	Religion II	A partial replication of Religion I (1991), with new questions.
1999	Social Inequality III	A partial replication of the Social Inequality modules from 1987 and 1992, with new questions.
2000	Environment II	A partial replication of Environment I (1993), with new questions.
2001	Social Networks II: Social Relations and Support Systems	Based on Social Networks I (1986), with new questions.
2002	Family and Changing Gender Roles III	A partial replication of Family and Changing Gender Roles II (1994), with new questions.
2003	National Identity II	A partial replication of National Identity I (1995), with new questions.
2004	Citizenship I	A new module.
2005	Work Orientations III	A partial replication of Work Orientations II (1997), with new questions.
2006	Role of Government IV	A partial replication of Role of Government III (1996), with new questions.
2007	Leisure Time and Sports I	A new module.
2008	Religion III	A partial replication of Religion II (1998), with new questions.
2009	Social Inequality IV	A partial replication of Social Inequality I-IV (1987, 1992, and 1999), with new questions.
2010	Environment III	A partial replication of Environment II (2000), with new questions.
2011	Health and Health Policy I	A new module.
2012	Family and Changing Gender Roles IV	A partial replication of Family and Changing Gender Roles I-III (1988, 1994, 2002), with new questions.

3 Contents of the Social Inequality IV

The 2009 survey was the fourth of the Social Inequality module and partially replicated the 1987, 1992 and 1999 surveys. The replications and new questions are explained in Table 1. ISSP modules are developed over a minimum period of two years during which a multi-national drafting group prepares several questionnaire drafts in accordance with the decisions taken at general assembly meetings. These drafts are circulated to ISSP members for input and commentary. A final version is discussed and signed off at the general assembly meeting prior to the year of fielding. The members of the drafting group for Social Inequality IV were the Netherlands (convenor), Australia, the Czech Republic, Hungary, Taiwan, and the USA.

The table below outlines the topics covered in the module and indicates which were new and which were replicated. The questionnaire item numbers are given in the first column. If different, the German questionnaire numbers are included in brackets. The variables in the second column are those of the international ISSP data set.

4 The German Module

The study description sheet below was submitted to the archive with the 2009 data. We expand somewhat the information contained in this in the following sections. A detailed questionnaire on the 2009 fielding was completed by ISSP members, including Germany, in 2009 and 2010 and will be available on the GESIS web site.

4.1 Translation of the Source Questionnaire

Two independent translations were made of the new questions in the module by translation experts. These were discussed in a group meeting with members of the ISSP team and members of the GESIS cognitive testing laboratory. A translation expert finally checked the quality of the group decisions. After the pre-test, a few changes were made to the translation.

For the two questions on wealth (ISSP 2009 source questionnaire: q21a on the money left if home/apartment was sold and q21b on the money left if stocks/bonds were converted into cash) the answer scales were not translated but, following the instructions included in the source questionnaire and modified in an email³⁰ to all ISSP members, constructed country-specifically. The general idea of this construction is to use external reliable information on the country-specific individual wealth distribution. For the German ISSP 2009 questionnaire we used information from the German Socio-Economic Panel Study (SOEP) 2007 on net owner-occupied property and net financial assets, generously provided by the SOEP staff on personal request. The first two answer categories of each question are identical in all ISSP field questionnaires³¹; the other 10 answer categories are constructed. We started with the mean value of the respective wealth distribution as mid point of category 7 and then calculated the midpoint of category 3 as 1/6th of the mean and the midpoint of category 11 as the product of the mean multiplied by 6. The other interspace categories were evenly distributed between the categories 3, 7, and 11. Category 12 was added starting consistently with the maximum value of category 11 as minimum value and had an open ended maximum. Finally we rounded the minimum and maximum values of all categories to the nearest appropriate exponent of 10 Euro.

³⁰ Revision of instructions in Feb. 2009: The categories in the source questions 21A and 21B are not consistent with the TN for these questions. For example, the mean value of category 3 in Q21B (7.500) is approx. 1/13th of the mean value of category 7 (100.000), while it should be approx. 1/6th according to the TN on p.18. We recommend that you choose midpoints of categories 3 and 11 as near as possible to 1/6th and 6x of category 7, but also that the min and max values of the categories is rounded to the nearest appropriate exponent of 10, depending on your currency.

³¹ Q21a: 1“just debts“ 2 „I/we do not own a home“; q21b: 1“just debts“ 2 „nothing“.

4.2 Sample

The ISSP modules for 2009 (Social Inequality) and 2010 (Environment) were fielded together with the ALLBUS 2010 study in a split. The ALLBUS sample in 2010 was designed to yield a representative sample of the adult population (18 years and older) living in private households in Germany, including foreigners able to complete the questionnaire in German. The sample was drawn in a two-stage design from official registers of inhabitants kept by municipalities throughout Germany. First the communities and sample points were selected randomly. Then individuals were randomly selected from each sampling point. Full details of the sample are presented (in German) in the methods report on ALLBUS 2010 (forthcoming).

4.3 Pre-testing

Pre-testing for translated versions of source questionnaires differs from pre-testing of questionnaires which do not yet have a finished form. Irrespective of what a pre-test of a translation seems to indicate, only a limited number of changes can be made if the source questionnaire has been finalised. The ordering of questions, can usually not be changed, nor the format of questions or response categories, since these changes raise issues of comparability.

Pre-testing in the sense of a 'trial run' can indicate how long administration can take, highlight lay-out problems, and to some extent, point to difficulties in comprehension related to translation. In an ask-the-same-question approach, changes of these kinds have to be made while the source questionnaire is still being developed and tested.

A pre-test was run to test for various problems of the CASI (Computer assisted self interview) interview and design issues. After the pre-test, a few changes were made to the design of the questionnaire.

4.4 Fielding and Response

Fielding began on May 31st 2010 and ended on November 1st 2010. The ISSP module was a self-completion questionnaire administered at the end of the ALLBUS CAPI interview. A total of 1395 questionnaires were completed for the module (956 in western states; 439 in eastern states). 98.9 % of ALLBUS respondents agreed to complete the ISSP module. The total ALLBUS response rate was 34.4 % (34.9 % in western states; 33.4 % in eastern states). Based on this, the response rate for the ISSP 2009 was 33.9 % (34.0 % in western states; 33.6 % in eastern states).

The 2009 ISSP module was fielded as a CASI interview (computer assisted self interview) such as already the German ISSP 2005 - ISSP 2008. Prior to ISSP 2005, a paper and pencil self-completion questionnaire (in the following abbreviated PAPI) was used to administer the ISSP. To design the interview similar to PAPI and minimize any potential effects from options offered by a computer programme, answers were not forced; in addition changing answers and not answering were allowed. Respondents were instructed how to complete the ISSP interview on a laptop and by using a pen, in particular how to change answers, how to continue with the next question and how to go back to the questions and the already given answers.

While ISSP modules are designed as self-completion questionnaires, 22.4 % of the cases were administered as interviews for various reasons (23.7 % in western states; 19.4 % in eastern states). If we compare the ISSP 2009 to the four other ISSP surveys that were CASI administered then similar amounts occur as for ISSP 2009: in ISSP 2005 about 27 % were interviews, in ISSP 2006 about 25 %, in ISSP 2007 about 27 %, and in ISSP 2008 about 27 %. If we compare the amounts of interviews in

CASI administered ISSP surveys to those in PAPI administered ISSP surveys, then CASI surveys do not consistently show higher amounts of interviews than PAPI surveys (see figure 1).

All things considered, there is neither a clear institutional nor a clear mode effect. The results do not seem to reflect a specific aversion against CASI but very likely a more general aversion against self-completion.

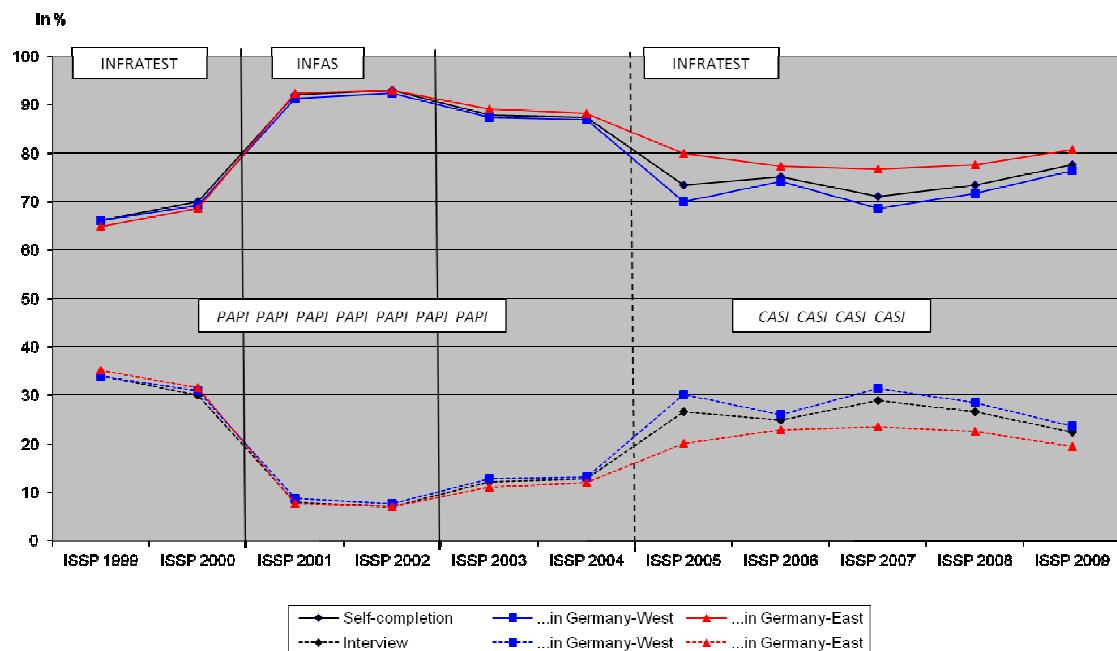

Figure 1: ISSP surveys 1999-2009

Dropouts can also serve as an additional indicator of CASI related problems. If dropouts dramatically increase when ISSP is run as CASI the decision to use that mode had to be reconsidered. However, analyses of the data revealed that dropout rates did not get worse by changing the mode from PAPI to CASI: between ISSP 1999 and ISSP 2004 the proportion of ALLBUS respondents who did not answer the ISSP questionnaire increased from 6 % in ISSP 1999 to 10 % in ISSP 2004. In the CASI surveys the corresponding dropout rates were lower with about 2 % in ISSP 2005; 3 % in ISSP 2006; 1 % in ISSP 2007, 2 % in ISSP 2008, and 1 % in ISSP 2009. The change between the ALLBUS CAPI interview and the ISSP CASI seems to be smoother than between CAPI and PAPI (see figure 2).

4.5 Data Editing and Occupational Coding (ISCO 1988 and ISSP 2009 specific items)

The fielding institute delivered a formally edited data set to GESIS. GESIS carried out additional data editing and prepared the data for merging in accordance with the ISSP 2009 set-up from the ISSP archive. Coding of current or former occupation was also carried out at GESIS (ISCO 1988; for details of ISCO 1988, see, for example, International Labour Office, 1990).

ISSP 2009 has got a somewhat extended part on the socio-demographic background of the respondents. There are three items asking about the occupational sector of the respondents' parents and the occupational sector of the respondents' first job distinguishing between private and public sector and self-employment. These two items showed a considerable number of answers in the additional "other" category where respondents had the chance to write when they were not sure where to tick. In accordance with ALLBUS coding procedures, we did individual coding of these open-ended answers if answers could be clearly assigned: Family members working in family business were coded as "employee of a private company or business" and not as self-employed due to the missing accountability in case of entrepreneurial risk. Answers referring to nationally owned companies (VEB), agricultural cooperatives (LEP), or Soviet-German stock corporations (SDAG) in the former German Democratic Republic were coded "public sector". Where farmers were mentioned in general, we decided to code as self-employed. Housewives, being not in paid work, did not receive a substantive code and were coded as "no answer". Answers that could not clearly be assigned were maintained as "other".

Another two items dealt with the occupational group the respondents belonged to in their first and current job. While the questionnaire and the resulting data set also included ISCO on the first and current job of the respondents – either as part of the ALLBUS standard demography or as additional item in the ISSP 2009 questionnaire – we deliberately abstained from any changes after consistency checks to allow for analyses of the pseudo-ISCO items' value.

5 Archiving of Social Inequality IV Data Sets

In order to be officially archived member countries need to deliver data sets to the archive along with a study monitoring description sheet, deliver a study monitoring report (SMQ) to GESIS and, if any difficulties are noted in the SMQ, have these resolved.

The Questionnaires (English and German)

The numbering of the German questionnaire differs slightly from the English. Filter questions were asked as separate questions and not as part of the substantive questions. Obligatory background variables not included in the self-completion questionnaire were asked in the ALLBUS survey which preceded the ISSP module. A documentation of the construction of the ISSP 2009 background variables will be available online with the ISSP 2009 international data file.

GENERAL NOTES TO ISSP MEMBERS

1. All notes which are not part of the questionnaire and intended only for members (for example, translation notes, TN) are enclosed in double, square brackets [[like these]]..
2. All the elements in questions which require local adaptation are enclosed in angle brackets. These instructions often relate to adding the name of the relevant country. For example, in Australia “Generally, how would you describe taxes in <country> today?” would read “Generally, how would you describe taxes in Australia today?”
3. Every question starts with a reference between square brackets to earlier Social Inequality questionnaires: A=1987, B=1992, C=1999, D=2008 (=pretest). The reference also contains the ITEM NAME (which refers to names in merged datafile). For example: [[AHEAD16: C,D]] “To get all the way to the top in <country>, you have to be corrupt.” This question was only asked in the Social Inequality module 1999 and in the pretest 2008.
4. For questions for which no “Can’t choose” is provided, code non-productive or missing answer to -99.
5. A fully harmonized file with data of all three previous ISSP Social Inequality rounds (1987, 1992, 1999) and the 2008 pretest is available at:
<http://home.fsw.vu.nl/HBG.Ganzeboom/issp2009>.
6. The Social Inequality IV module proper consists of 47 attitudinal questions and 13 background questions. To be consistent we also present 3 standard background questions that are strongly related to the module questions. In addition, we offer 4 background questions and 6 attitudinal questions as options. Note that according to ISSP rules the 47 attitudinal questions of the module proper need to be presented to the respondents consecutively, the background questions, both standard and optional, as well as the optional attitudes can be put in where it fits best. Our recommended order is: {Q24abc}, Q1-Q14ab, {Q22ab}, Q15ab, Q16abc, Q17, {Q25abc}, {Q23ab}, Q18, Q19ab, Q20, Q21ab. Variables in curly brackets {} are optional.

Social Inequality IV

[[TN: The word RACE in Q1i should be translated referring to 'ethnicity' in a broader sense.]]

To begin we have some questions about opportunities for getting ahead ...

Q1. Please tick one box for each of these to show how important you think it is for getting ahead in life... (please tick one box on each line)

	Essen-tial	Very Impor-tant	Fairly impor-tant	Not very impor-tant	Not impor-tant at all	Can't choose
a. [[AHEAD1: ABCD]] ... how important is coming from a wealthy family?	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5	<input type="checkbox"/> 8

[[TN to Q2bcd: with 'university' we mean the truly academic segment of higher education]]

Q2. To what extent do you agree or disagree with the following statements? <i>(please tick one box on each line)</i>						
	Strongly agree	Agree	Neither agree nor disagree	Dis- agree	Strongly disagree	Can't choose
a. [[AHEAD16: CD]] To get all the way to the top in <country> today, you have to be corrupt.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5	<input type="checkbox"/> 8
b. [[NEW: AHEAD20: D]] In <country> only students from the best secondary schools have a good chance to obtain a university education.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5	<input type="checkbox"/> 8
c. [[NEW: AHEAD19: D]] In <country>, only the rich can afford the costs of attending university.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5	<input type="checkbox"/> 8
d. [[NEW: AHEAD21: D]] In <country> people have the same chances to enter university, regardless of their gender, ethnicity or social background.	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5	<input type="checkbox"/> 8

Q3. [[JUSTPAY2: CD]] Would you say that you earn... If you are not working now, please tell about your last job. (please tick one box)	
Much less than I deserve	<input type="checkbox"/> 1
Less than I deserve	<input type="checkbox"/> 2
What I deserve	<input type="checkbox"/> 3
More than I deserve	<input type="checkbox"/> 4
Much more than I deserve	<input type="checkbox"/> 5
Never worked	<input type="checkbox"/> 6
Can't choose	<input type="checkbox"/> 8

[[Q4-5 should be on facing pages. However, they should NOT be on the same page – respondents should answer the 'ACTUAL' earnings questions first, and only then go on to answer the 'SHOULD questions.]]

[[In 1992, Q4-5 asked about YEAR and BEFORE taxes, in 1999 countries could ask the Q5-6 in the way that was most customary in their country. You should follow the way that you have asked it before. If you did not participate in the 1992 and 1999 ISSP and, you may use whichever of 'year', 'month', 'fortnight', or 'week' is most customary in your nation. Use 'before' tax or 'after' tax, according to the custom in your nation. For example you might say: "Please write how much you think they usually earn each year before taxes", or "Please write how much you think they usually earn each week before taxes", or "Please write how much you think they usually earn each week after taxes".]]

[[A LARGE NATIONAL CORPORATION: a privately owned corporation that operates throughout the country, not a corporation owned by the government. "Company" is also acceptable in English rather than "corporation".

A CABINET MINISTER IN THE <NATIONAL> GOVERNMENT: use the word that makes clear sense in your language. For example, in Australia it would be 'A cabinet minister in the federal government'.]]

[[Do not insert "Can't choose" in the questions.]]

[[Coding instructions:

- If answered with a range, take best estimate midpoint
- If answered DK, take -98.
- If not answered, code -99.
- If multiple answers, take first.]]

<p>Q4. We would like to know what you think people in these jobs actually earn. Please write in how much you think they usually earn each <YEAR/MONTH/FORTNIGHT/WEEK>, <BEFORE/AFTER> taxes. Many people are not exactly sure about this, but your best guess will be close enough. This may be difficult, but it is very important. So please try.</p> <p><i>Please write in how much they ACTUALLY earn each <year/month/fortnight/week> <before/after> taxes.</i></p>

BACKGROUND QUESTIONS

[[TN: The background questions can be asked separately from the attitudinal questions. Country specific wording is allowed as long as it gets this information. Like other demographic and background variables, the questions can be put wherever you like in the questionnaire – they need not be with the other ISSP questions.]]

[[TN: The age reference – “when you were <14-15-16>” in the questions below – should preferably be age 15 (PISA age). Relevant arguments to deviate are (A) when the question or similar questions have been asked with a different referent age, and the alternative choice would make the questionnaire more consistent, (B) when age 14 or 16 is clearly more relevant in terms of educational or labor market choices.]]

[[TN: Countries that expect the categories in Q15a, Q16b, Q18a and Q19a not to fit their national situation, should add country specific codes. Examples: collective farming in (post)communist countries, helper in family business/farm, apprenticeships as first jobs.]]

[[TN: Answers to open alternatives in Q15a, Q16b and Q18a – if included – should be post-coded.]]

[[TN: Answer categories for Q21ab can vary between countries. Use the following guidelines for developing the categories:

- Categories 1-2 are reserved
- Choose the midpoint of category 7 to be equivalent of the expected mean wealth using external information.
- Choose midpoints of categories 3 and 11 to be equivalent to approximately 1/6, respectively 6x the midpoint of category 7.
- Interspace other categories evenly between 3, 7 and 11.
- Add open ended category 12 consistent with 11.
- Replace € sign with appropriate equivalent in your country.]]
