## **Introduction**

This report is based on the study monitoring survey conducted by ZUMA for the ISSP on the 2002 Family and Changing Gender Roles module.

Thirty-four member countries archived the 2002 Family and Changing Gender Roles module, all of them have completed the monitoring questionnaire. Details of the individual answers members provided are presented in the summary chart which follows here. We have done our best to summarise the answers we received and to check the information with members. Members were given the opportunity to make corrections before the report is made available on the Archive web site as a supplement to the 2002 Codebook.

The Study Monitoring Questionnaire (SMQ) has been modified from year to year. Questions on fieldwork, translation, and sampling have, for example, changed and questions on documentation been added. The latest version of the study monitoring questionnaire is appended. Some members used old versions of the SMQ they had kept. This means that some information for these countries is missing in the report. In order to avoid this in future, members are requested to contact ZUMA for the latest questionnaire in either online or word file format.

## **Summary of the findings**

### **Language(s) and translation (see pages 1–6 of the Findings Chart)**

From 1999 on, the SMQ asks whether members checked or evaluated their translations. All of the twenty-seven countries that produced translations checked or evaluated them (the Swiss Italian translation is an exception). Fourteen countries did not pre-test the translated questionnaire (Chile, Czech Republic, Denmark, France, Japan, Latvia, the Netherlands, Norway, Poland, Portugal, Russia, Slovenia, Spain, and Sweden). The Philippines fielded in five languages, Switzerland in three languages and Finland, Israel, and Latvia in two languages. All the other member countries fielded in one language.

More countries reported translation problems than in the past (Chile, Cyprus, Czech Republic, Flanders, Germany, Hungary, Mexico, Norway, and Taiwan).

**Survey question coverage and context (see pages 7–8 of the Findings Chart)**

All countries included all of the core items. Eleven members omitted background variables, usually by mistake.

In 2002, twenty-two countries fielded the ISSP module as part of a larger survey. A new question in the SMQ asking for information about accompanying studies (topic, study title, etc.) is included in the report (see appendix).

**Sampling (see pages 9–12 of the Findings Chart)**

The sampling procedures and details reported for the 2002 module are for the most part similar to those reported in earlier years. Three countries seem to be using quota procedures at different stages; Brazil, the Slovak Republic, and the Netherlands. The Slovak Republic intends to change to a random sample in 2004 (for the National Identity module). Eleven reported using substitution of different kinds; Austria, Chile, Cyprus, Flanders, Hungary, Latvia, the Netherlands, the Philippines, Russia, Slovak Republic, and Spain.

Finland and Switzerland had a lower age cut-off at 15 years, Japan and the Netherlands had a cut-off at 16 years; all other members had a lower age cut-off at 18 years of age. Five countries reported an upper age cut-off (Finland at 74, Latvia at 75, Norway and Sweden at 79, and Flanders at 85 years).

**Data collection (see pages 13-17 of the Findings Chart)****MODES**

Essentially the ISSP questionnaires are administered as face-to-face interviews or in a self-completion format. Five countries combined several modes in fielding, usually as a result of fielding the ISSP module together with another study and administering the background variables for both studies face-to-face and the ISSP as self-completion (Bulgaria, Germany, Flanders, Northern Ireland, and Poland).

Two countries using an interviewer-administered mode had two advance contacts, letter and telephone call (Switzerland and the United States). Nine countries had advance letters (Germany, Flanders, Great Britain, Hungary, Japan, Northern Ireland, Poland, Portugal, and Slovenia), the Netherlands had a telephone pre-contact. In Flanders interviewers delivered the questionnaire and respondents were asked to return them by post. Flanders therefore used three reminders, two by mail and one by telephone. Seven countries conducted their survey by mail (see table on page 17). Of these, Australia had six mailings, New Zealand and Norway had four, Finland and Sweden had three, Denmark and France had two mailings. The number

of mailings is usually seen as relevant for enhancing response (Dillman 2000). Sweden and Denmark had a telephone reminder. In Denmark, about 20% (256 of 1377) of the interviews were collected by telephone; the mode variable identifies these. Telephone interviews are not permitted in the ISSP.

#### INCENTIVES

Eight countries reported they had used incentives (Chile, Germany, Japan, the Netherlands, Northern Ireland, Norway, Taiwan and the United States). This information was not collected in the SMQ until the 2001 module.

#### FIELDING DATES

Dates of fielding for the 2002 module range from 2001 to 2004:

2001	1 country
2001-2002	2 countries
2002	19 countries
2001 (end) – 2003 (beginning)	1 country
2002-2003	4 countries
2003	6 countries
2003-2004	1 country

Spain had the shortest fielding period, with five days, Australia had the longest, with more than a year.

In twenty-four of twenty-seven countries using interviewer-administered modes, interviewers approached addresses or households at different times of day and at different days of the week; in two countries at different times of day only (Latvia, Spain), and in one country at different days in the week only (Slovak Republic).

Countries differ considerably in the number of required contact attempts. The minimum required number of calls at an address or a household ranges from none (Cyprus, Slovak Republic, Switzerland, and the United States) to ten (Germany). Thirteen countries supervised interviews (proportions ranging between 1%-100%). With one exception (Japan), countries using interviewer-administered modes back-checked interviews (proportions ranging between 3%-95%).

**Information on response and outcome figures (see pages 18–19 of the Findings Chart)**

Quota procedures, substitution, and, in some cases, a lack of sufficient detail are the three main obstacles to calculating response rates for some of the ISSP 2002 studies (cf. reasons mentioned in the Park and Jowell report (1997) and expanded in the overview of the 1996-1998 monitoring studies, Harkness, Langfeldt, and Scholz, 2001). Members also differ in their definitions of outcome codes – of what counts as “eligible“, “ineligible“, or “partially completed interviews“, and so forth. The ISSP Nonresponse methods group is currently working on standard definitions for the ISSP.

The raw figures for eligible samples and final outcomes indicate, nevertheless, that the range in the ISSP is considerable – from about 20% to over 80% for the module.

**Data (see pages 20–21 of the Findings Chart)**

The great majority of members employed various measures of coding reliability, for the most part logic or consistency checks and range checks, followed by either individual or automatic corrections or both.

Sixteen of thirty-four countries applied subsequent weights or post-stratification to correct for errors of selection or response bias.

**Documentation (see page 22 of the Findings Chart)**

Nineteen countries reported they had a national methods report available (Australia, Austria, Brazil, Chile, Czech Republic, Germany, Spain, Flanders, Great Britain, Hungary, Norway, Northern Ireland, Poland, Russia, Taiwan, the Philippines, Slovenia, Sweden, Switzerland, and the United States). This information was not collected in the SMQ until the 2001 module.

## Appendix

Please provide information about the other study(ies) the ISSP was fielded with (e.g., topic, survey name).		
1	Austria	"Social Change in Austria"
2	Australia	na
3	Switzerland	The ISSP was fielded together with the "Eurobarometer in Switzerland (EBCH)". The topic of the EBCH of 2002 was Biotechnology which corresponds to the EB58.0 of the European Union.
4	Bulgaria	na
5	Chile	The ISSP study was part of the second National Public Opinion Study 2002 about politics, economy and corruption.
6	Germany	ISSP is part of the ALLBUS (German General Social Survey). The ALLBUS 2002 deals with various topics, such as religiosity, values and value orientations.
7	Flanders	Survey on Social-Cultural Changes in Flanders including the standard background variables
8	Great Britain	British Social Attitudes Survey, 2002
9	Hungary	The ISSP Family and Gender Roles module was placed in the beginning of the questionnaire, just after the questions on gender and year of birth. The whole module was asked in one block. It was followed by some other questions on family issues. Subsequent blocks related to 1. opinions about the Euro and the Hungarian currency 2. schooling problems of children coming from low class and gypsy population.
10	Ireland	The Family and Changing Gender Roles module was included as part of a larger survey addressing general social and political attitudes in Ireland.
11	Latvia	ISSP module was fielded together with ISSP module "National Identity" (topic B) and these were followed by questions on medical care.
12	Norway	1. Grandparents' role 2. Relationship parents-children 3. the ESRC project 'Employment and the Family'
13	Northern Ireland	Northern Ireland Life and Times Survey (NILT, 2002). Other topics included in the survey were Women in Politics, Attitudes/knowledge of the European Union, Political Attitudes, Community Relations, Rights of the Child.
14	Netherlands	Cultural Changes Survey 2002; ISSP module on Social Networks

<b>Please provide information about the other study(ies) the ISSP was fielded with (e.g., topic, survey name).</b>		
15	New Zealand	Some additional questions on the roles of men and women in society, and attitudes to abortion and euthanasia, were added after the ISSP module.
16	Portugal	na
17	Poland	Polish General Social Survey (PGSS)
18	The Philippines	Quality of life indicators, electoral preferences for May 2004, attributes of candidates, trust rating of selected personalities and political parties, domestic violence, polling on polls, media credibility, awareness of tuberculosis, most admired men and women.
19	Russia	General social and political problems of the Russian society
20	Slovenia	ISSP module National Identity - national survey Attitudes on Local Democracy
21	Taiwan	Taiwan Social Change Survey: the Third Survey of the Fourth Cycle. In addition to core ISSP questions, the themes related to gendered body-consciousness, attitudes toward sexuality, women in civil participation, and couple's marital satisfaction and lives.
22	USA	2002 General Social Survey
